Suvarna Jiwade

Data Analyst | Pune, Maharashtra, India
Email: suvarnabjiwade@gmail.com | Phone: +91 9021924696
LinkedIn: linkedin.com/in/suvarna-jiwade-47927923a | GitHub: github.com/suvarnajiwade

Professional Summary

Results-driven Data Analyst with expertise in Python, SQL, Machine Learning, and Power BI. Proficient in EDA, predictive modeling, and data visualization to drive business decisions. Experience in healthcare, finance, and retail analytics, translating complex data into actionable insights.

Skills

- Programming: Python, SQL, Excel
- Data Analysis: Pandas, NumPy
- Machine Learning: Supervised & Unsupervised Learning, ANN, CNN
- Data Visualization: Power BI, Matplotlib, Seaborn
- Web Technologies: Django, Flask
- Soft Skills: Problem-Solving, Adaptability, Teamwork

Education

Bachelor of Pharmacy | Dr. Babasaheb Ambedkar Technological University (CGPA: 8.41) | 2021 - 2024

Certifications & Achievements

- Python and SQL for Data Science (Great Learning)
- Full Stack Data Science Course (CodeSpyder, 5 months)
- Kaggle Competition Participant
- Hackerrank: Python (5 Stars), SQL (3 Stars)

Experience

Data Science Intern | CodeSpyder Technologies Pvt. Ltd | Aug 2024 - Present

- Built interactive dashboards and analyzed business KPIs.
- Utilized SQL for data extraction, cleaning, and manipulation.
- Developed predictive models using Random Forest, ANN, and CNN.
- Conducted exploratory data analysis (EDA) and presented insights to stakeholders.

Projects

Retail Orders Analysis - Python & SQL

- Analyzed customer order data using SQL queries and Python.
- Performed data extraction, transformation, and aggregation to generate insights.
- Identified purchase trends, product demand, and customer segmentation patterns.
- Optimized queries for better performance in large datasets.

House Price Prediction - Machine Learning

- Used Random Forest Regression to predict house prices based on historical data.
- Considered factors like location, property size, and amenities to improve model accuracy.
- Applied feature engineering and hyperparameter tuning for better results.
- Achieved high accuracy in predicting real estate pricing trends.

Credit Card Default Prediction - Python & ML

- Conducted EDA to identify key factors influencing credit card defaults.
- Built and trained machine learning models to predict default probability.
- Applied feature selection techniques to improve model efficiency.
- Provided insights to financial institutions for risk assessment.

Hospital Workflow Dashboard - Power BI

- Developed an interactive dashboard to track patient flow and hospital resource utilization.
- Analyzed admission trends, bed occupancy rates, and discharge patterns.
- Designed visuals for real-time monitoring of hospital efficiency.
- Delivered insights that helped optimize patient care and reduce wait times.
