

Advika Shah

[📞 Contact](#) — [✉️ Gmail](#) — [🌐 LinkedIn](#) — [🐙 Github](#)

Summary — Full-stack developer with a strong interest in business and data analytics, leveraging technical expertise to deliver data-driven business solutions.

Skills

Languages Java, Python, SQL, HTML, CSS, JavaScript

Tools VSCode, Git, Canva, Power BI, Excel, Postman, Shopify

Frameworks React, Node, Express, TailwindCSS

Libraries/DB MongoDB, Prisma

Soft Skills Adaptable, Communication, Problem Solving

Experience

Research and Development Intern (DRDO)

May 2025 – July 2025

- Spearheading the development of a secure internal software platform for DRDO to manage CARS-related data
- Ensuring role-based access control for various personnel to maintain confidentiality and operational integrity.

Web Development (LearnDU)

June 2024–October 2024

- Designed and implemented server-side architecture, developed APIs, and optimized database management to ensure seamless platform functionality.
- Performance Optimization: Identified and resolved bugs, enhanced system reliability, and ensured scalability and security of backend systems.

Projects

BookHouse(MERN Project)

May 2024 – June 2024

- Built with React.js for dynamic UI, using Axios for API requests, and Context API for state management, with responsive design using CSS Flexbox and Grid.
- Developed with Node.js and Express, using MongoDB for data storage, and implemented JWT for secure user authentication.
- Implemented search, sorting, and filtering functionality, along with user reviews and ratings, enhancing user experience and engagement with the platform.

Mental Wellness with Chatbot (React, Tailwind, Python, Flask)

Feb 2024 – Apr 2024

- Developed a user-friendly, visually appealing UI that integrates seamlessly with a chatbot for enhanced user engagement and intuitive navigation.
- Integrated OpenAI's API with a Flask-based backend to create a real-time, intelligent chatbot that processes user queries and delivers personalized, context-aware responses.
- Optimized UI and chatbot for seamless use across desktop and mobile devices. with the platform.

Diabetes Prediction Model using ML (Python, Jupyter)

Nov 2023

- Performed data pre-processing, including handling missing values, normalization, and feature selection, to improve model efficiency and predictive performance.
- Used machine learning algorithms (e.g., logistic regression, decision trees), with key focus on accuracy, precision, and recall for early detection.

Movie Booking System (Java)

Aug 2021

- The Movie Booking System is a Java-based application enabling users to browse movies, select showtimes, and book tickets
- It supports user registration, snacks, and real-time seat selection. Administrators can manage movie listings and showtimes.

Education

Manipal University Jaipur (2021 - 2025)

BTech in Information Technology

Minor: Cyber Security

Position of Responsibility

- MUJ ACM W Student Chapter - Chairperson
- MUJ ACM Student Chapter - Social Media Head
