Experience

Data Analyst Intern - LearnBay, USA

May 2024–Sept 2024

- Automated ETL pipelines using Python and SQL, reducing manual preprocessing time by 60%
- Built Tableau dashboards to monitor weekly trend KPIs, driving strategic improvements for the marketing team
- Conducted exploratory analysis of 200K+ orders to uncover customer behavior insights; results led to a 10% increase in upsell conversions
- Collaborated with product managers and engineers to refine ML feature priorities and improve documentation quality

PROJECTS

E-Commerce Sales Analysis

- Analyzed e-commerce customer and order data by integrating MySQL with Python. Executed basic to advanced SQL queries through Python scripts to uncover insights on sales, customer behavior, and product performance. Used pandas for data manipulation and matplotlib/seaborn for visualizing trends such as revenue growth, customer retention, and seller performance. Optimized SQL queries for performance and presented insights with visual dashboards.

Customer Churn Analysis

- The EDA process involved loading the dataset, inspecting its structure, cleaning (notably converting TotalCharges to numeric), checking for missing and duplicate data, and converting coded variables for clarity. The churn rate was visualized and quantified, setting the stage for further analysis or modeling.
