Profiles	 Pratik2526  Pratik Shinde	
Summary	Passionate Data Scientists with 1 year of experience in Python, data analysis, machine learning, and frameworks like Flask and Django. Skilled in extracting insights from data, building intelligent, data-driven solutions, and delivering efficient, scalable applications.	
Experience	Flairminds Software Ltd Data Scientist Aug 2024- Present Pune, Maharashtra Risk Management System – - Implemented secure reset password functionality for user, incorporating token based authentication and email verification to enhance security. - Enabled users to view a summary of uploaded documents generated through OCR technology using Gemini, with efficient storage for quick access. - Enabled users to view a summary of uploaded documents generated through OCR technology using Gemini, with efficient storage for quick access. - Developed a feature to generate reports in Excel, PDF and CSV formats by fetching the data from database - Designed and built robust RESTful APIs to support CRUD operations for managing risk related data effectively. Technologies Used: Python,Django,Postgresql,MongoDB,OCR Educational Platform for Student Learning– - Implemented a scheduler to send email reminders to users and unsubscribed users about chatbot access and subscription. - Integrated OpenAI API to build a functional chatbot for user interaction. - Utilized PostgreSQL for efficient data storage and management. - Customized the Django admin panel to enhance usability and user experience. Technologies Used: Python,Django,Postgresql Vehicle Fault Prediction– - Performed end-to-end data analysis on vehicle sensor data, including data cleaning, feature engineering, and exploratory data visualization to identify patterns and correlations in fault occurrences. - evaluated multiple machine learning models (e.g., Random Forest, SVM, XGBoost) to predict vehicle faults, achieving improved accuracy through hyperparameter tuning and cross-validation. - Visualized key insights and model performance using tools like Matplotlib and Seaborn, enabling better interpretability and understanding of predictive maintenance trends. Technologies used: Python, Machine Learning, Pandas, Matplotlib, Seaborn. Elite Softwares Front-End Development Intern Dec 2022 - Feb 2023 Pune,maharashtra College Information Management Website - Worked as a Front-End Development Intern, creating responsive and visually appealing web interfaces. - Applied HTML and CSS to design user-friendly layouts with a focus on visual aesthetics and user experience. - Gained hands-on experience and continuously improved front-end development skills through practical implementation. Technologies Used: HTML, CSS	
Education	Dr.D.Y.Patil Institute of Engineering Management&Research,Akurdi pune CGPA: 8.9	2020-2024 B.E AI&DS
Skills	Python, Flask, Django, SQL, Postgresql, Mysql, Pandas, Numpy, Machine Learning	

Certifications**Python for Data science**

Issuer: NPTEL

NPTEL online certification on python for data science. Python has in-built mathematical libraries and functions, making it easier to calculate mathematical problems and to perform data analysis.

Supervised Machine Learning: Regression and Classification

Issuer: Coursera

Coursera online certification on supervised machine learning algorithm for beginners. This course taught me basics of supervised machine learning algorithm and its concepts.
