SUMMARY

Working as an Intern with more than 1 year of experience in analyzing data with SQL, Power BI, Python and Excel. Proficient knowledge in Production Support & Incident Handling, Reference Data Management, Statistical Analysis and other Analytical tools and technologies.

SKILLS

- **Programming & Analytics:** Python (NumPy, Pandas), SQL (Oracle), Shell Scripting
- **Data Visualization & Reporting:** Power BI, Excel, LaTeX
- **ETL & Data Management:** Informatica ETL Tool, Job Scheduling & Monitoring (Autosys)
- **Systems & Tools:** Unix, Git, ServiceNow (ITIL)

WORK EXPERIENCE

Two Registers

INTERN

June 2024 – Present

(Remote), INDIA

- Gained hands-on experience in Power BI by creating interactive dashboards, reports, and data visualizations to present business metrics and KPIs.
- Performed data analysis using Power BI and Excel to identify customer trends, sales patterns, and business insights through exploratory data analysis.
- Handled client interactions and communications including requirement gathering, progress updates, and presenting analytical findings to business teams.
- Executed CRM activities such as data entry, lead management, customer segmentation, and database maintenance to support client relationship workflows.
- Developed Power BI data models with custom relationships, DAX measures, and automated data refresh processes for real-time reporting.
- Managed client onboarding processes and provided support in translating business requirements into technical Power BI solutions.
- Conducted data quality validation to ensure accuracy and reliability of reports delivered to clients and internal teams.

Capgemini Technology Services India Limited.

ANALYST

June 2022 – June 2023

Navi Mumbai, INDIA

- Type of Industry: Investment Banking (Reference Data).
- Project Description: Consuming reference data from various vendor, adding filtration validation and other logic based on business requirement, creating a golden data set and delivering the same with downstream.
- Supported data mastering applications focused on Fixed Income and Equities asset classes, managing instrument, pricing, issuer, and market-level data using ETL pipelines.
- Segregated and processed data based on mastering systems using Python and shell scripts integrated into the ETL process.
- Applied data validation and transformation logic using Python libraries including NumPy and Pandas to manage large volumes of reference data efficiently.
- Utilized NumPy for array-based operations and numerical computations to support real-time data cleansing, especially in pricing and statistical validations.
- Collaborated with cross-functional teams to develop and refine business logic ensuring accurate and timely delivery of high-quality data sets to downstream systems.
- Provided end-to-end production support for static and pricing reference data flows, handling incident and ticket management through ServiceNow, ensuring SLA compliance and quick issue resolution.

- Handled job scheduling and monitoring using Autosys, and participated in release and deployment cycles for production changes.
- Worked closely with development teams to implement tactical fixes for production issues and optimize ETL workflows.
- Monitored and managed daily, weekly, and monthly data feeds from various internal and external vendors, ensuring data integrity and completeness.

EDUCATION

COEP Technological University

M. Tech Computer Science

July, 2025

Pune, India

Ramrao Adik Institute Of Technology

B.E. Electronics Engineering

November, 2020

Navi Mumbai, India

Datta Meghe College Of Engineering

Diploma in Electronics and Tele-Communication Engineering

June, 2017

Navi Mumbai, India

PROJECTS

Power BI Mini Project - Amazon Store Sales Dashboard

- Developed an interactive Power BI dashboard analyzing Amazon store sales data across multiple dimensions including product categories, geographical regions, and customer segments.
- Created visualizations for seasonal trends, profit analysis, payment modes, and state-wise performance mapping with KPIs tracking 2M in sales, 175K profit, and 5901 orders to support strategic business decision-making.

Sunflower Plant Disease Detection using Deep Learning: An advanced approach for precision agriculture (M.Tech Research Project)

- Developed a sunflower leaf defect detection system using a custom Y-Net architecture.
- Combined image classification and segmentation to accurately identify defects like fungal spots and shrinkage.
- Trained the model on an annotated dataset with data augmentation for further generalization.
- Achieved 92% segmentation accuracy using metrics like IoU and Dice coefficient.
- Deployed the system for real-time inspection using TensorFlow and OpenCV.

Design and Performance Estimation of Polycrystalline Silicon Solar Cells using Comsol multi-physics (B.E. Final Year Project)

- The project investigated various parameters, such as the drift component, diffusion component, thickness also analyzed the efficiency of the poly-crystalline silicon layer and a detailed study about the simulation of polycrystalline silicon cell using the software Comsol Multi-physics.

CERTIFICATIONS

- **Publication:** Paper Title: “Hybrid Approach for Sunflower Disease Detection: CNN Feature Extraction and ML Model Evaluation”
Presented at 3rd International Conference on Electronics and Renewable Systems (ICEARS 2025), February 2025.
[10.1109/ICEARS64219.2025.10941539](https://doi.org/10.1109/ICEARS64219.2025.10941539)
- **Course:** Microsoft Technology Associate – Introduction to programming using Python, Data Analysis with Python (GeeksforGeeks).
- **Workshop:** Hands-On Training to create AI-Powered interactive dashboards in Power BI. (Office Master).
