PROFILE SUMMARY

Proactive and results-driven professional with experience in data science and analysis, optimizing enterprise-level solutions through data-driven insights. Experienced in automating end-to-end data workflows, boosting productivity by 95%, and ensuring data accuracy at 99.984%. Proficient in leveraging Power BI, SQL, Python, and Tableau to analyze large datasets, creating interactive dashboards, and delivering actionable insights. Passionate about advancing skills in machine learning, with a strong foundation in statistical analysis and problem-solving to contribute effectively across diverse data-driven roles.

TECHNICAL SKILLS

Python | Machine Learning | Power BI | Microsoft Excel | Power Query | SQL | Tableau | Pandas | NumPy | Matplotlib | C | Jira

PROFESSIONAL EXPERIENCE

Brane Enterprises

June 2023 – Sep 2024

Data Science Trainee (Solution Delivery)

- Achieved an exceptional productivity surge of 95.3% and a precision benchmark of 99.994% by leading a dynamic team of four to pioneer and execute an automated ETL process utilizing Power BI. This visionary initiative propelled our business unit to surpass targets three months ahead of schedule.
- Spearheaded collaborative efforts with UI/UX, QA teams, and stakeholders to collect requirements, craft compelling user stories, and define product prerequisites.
- Conducted comprehensive market reconnaissance to pinpoint competitors and unearth unique selling propositions (USPs), delivering persuasive presentations to stakeholders, thus shaping the trajectory of competitive market products.
- Written SQL queries to dissect voluminous datasets and streamline data preparation for dynamic dashboard visualizations, significantly amplifying decision-making efficacy.
- Architected and engineered interactive Power BI and Excel metric dashboards, harnessing sophisticated features like DAX measures, KPI visuals, and ribbon charts. Crafted polished reports and presentations, elevating insights for esteemed stakeholders and business unit leaders.
- Led the creation of process flows, entity-relationship diagrams (ERDs), and exhaustive product documentation, including an innovative Expense Management solution tailored for a discerning US-based clientele.
- Contributed substantively to the development of an avant-garde AgriTech ERP solution, meticulously crafting DLD diagrams, ERDs, process flows, and precision-focused product tracking sheets, thus revolutionizing operational efficacy

Inclusive Growth Chain

Feb 2023 – April 2023

IoT & Analytics Engineer (Internship)

- Designed and developed a water quality control device using IoT technology. Developed and maintained technology solutions for clients that met their requirements from analysis to implementation.
- Conducted meticulous data cleaning and structuring to enhance data quality and reliability and analysed data comprehensively to extract actionable insights and trends to forecast future outcomes.
- Designed, built, tested, assembled, supported, and configured applications using required user needs. Anticipated and resolved business issues with agility. Conducted research on water quality monitoring techniques and sensor technologies.
- Performed Coliform test for water quality using E-coli and known turbidity measurement through the water images taken from the device.

PROJECTS

SMS Spam Detector - [Link](#) | Python, scikit-learn, NumPy, Pandas

- Engineered a sophisticated machine learning model to accurately differentiate between spam and legitimate messages.
- Implemented an effective spam detection system to enhance user experience and security.

US Traffic Accident Data Analysis - [Link](#) | Python, Pandas, Matplotlib, Folium

- Delivered actionable insights into traffic accident patterns by integrating road conditions and weather variables.
- Created visualizations of accident hotspots and severity distributions to inform decision-making for road safety initiatives.

Titanic Survival Analysis - [Link](#) | Python, NumPy, Pandas, Matplotlib

- Conducted an extensive examination to uncover survival trends, focusing on gender-specific outcomes.
- Crafted informative visualizations to communicate insights into survival dynamics during the Titanic disaster.

CERTIFICATIONS

- IBM Data Science Professional Certificate – Coursera
- Data Analysis using Python – *Great Learning*
- Data Visualization using Python – *Great Learning*
- Artificial Intelligence Virtual Experience Program- *Forage*

EDUCATION

Mahatma Gandhi Institute of Technology

2019 - 2023

Bachelor of Technology in Mechatronics

LEADERSHIP & ACHIEVEMENTS

- Achieved second place & won a prize for pitching & representing the idea of our startup "GOLDEN PLOVER" to CEOs at Shark Tank MGIT.
- Led a team of 4 and qualified for the second round; presented the idea for the Accenture Imagination Challenge 2023 - Accenture, India.
- Participated in Codefin - A National Coding Hackathon.
