Objective

I am constantly seeking to apply my knowledge, learn something useful, and challenge myself to become a better performer in line with the company's requirements. I am flexible with different technologies and love learning new things. I have developed a strong understanding of Object-Oriented Programming and Data Analytics. With this knowledge, I am passionate about solving real-world problems using both code and data.

Internships And Training

- I successfully completed an 8-week **Salesforce internship**, where I gained hands-on experience in Salesforce Fundamentals, including Organizational Setup, Relationship & Process Automation, Types of Flows, and Security. Additionally, I developed skills in Apex programming, as well as Testing and Debugging, enhancing my overall knowledge of the Salesforce ecosystem.
- I attained training at **Accenture** during the Data Analytics and Visualization Job Simulation, where I worked on practical tasks such as data cleaning and modeling, creating effective visualizations, and presenting data insights to clients through storytelling, which helped me improve my knowledge and skills.

Skills

Programming — SQL - SQL Server, Python - Pandas, NumPy, Matplotlib, Seaborn , Core Java, HTML5, CSS, JS

Tools — Power BI, Tableau, Jupyter Notebook, MS Excel, Jira, Confluence, Hive, Hadoop, Google BigQuery

Financial & Investment Analytics — Revenue Forecasting, Risk Analysis, Portfolio Performance Evaluation

Key Competencies — EDA, ETL, Risk Management, Stakeholder Management, Leadership, Problem Solving

Projects

1. Easy Trip :

- **Technologies used** – HTML, CSS, JS, MongoDB database, node.JS, Formspre.
- **Roles and Responsibilities** –
- I set up a secure MongoDB connection using Mongoose, designed schemas for key entities like users and tours, and built CRUD APIs to manage data. I ensured smooth integration between the backend and frontend by developing APIs tailored for frontend requirements. Additionally, I optimized queries, implemented error handling, and validated functionality using Postman and MongoDB Compass, ensuring reliable performance.

2. Smart Farming Assistance Website :

- **Technologies used** – Python, scikit-learn, pandas, numpy, Flask, Jupyter Notebook, CSV Pickle (pkl files).
- **Roles and Responsibilities** –
- I developed a website using machine learning and deep learning to assist farmers with crop recommendation, fertilizer suggestion, and plant disease detection. I worked on data preprocessing, building models (Random Forest for crops, regression for fertilizers, and CNN for diseases), and integrating them into a Flask backend with an HTML, CSS, and JavaScript frontend. The project demonstrates my skills in end-to-end development and real-world problem-solving.

Education

Shivaji University, Kolhapur (DKTE Textile & Engineering Institute, Ichalkaranji) Aug 2021 - May 2025

B. Tech in Computer Science and Engineering (AI&DS) | CGPA:7.67

Kolhapur 10th from Ashoka Highschool. | Percentage: 89.20 12th from Govindrao junior college | Percentage: 73.08

Achievements & Certifications

- Leveraging my technical knowledge, I secured 3rd Prize in a National Level Technical Event, Tech-Symposium, a part of the Big Exhibition, held at DKTE.
- I gained a strong grasp of Information Security and Cyber Forensics concepts and effectively applied this knowledge in the exam, achieving a consolidated score of 68% and earning the Elite badge in the NPTEL Swayam course.
- Certified in Generative AI by Google, where I gained knowledge in AI models and content generation techniques.
- Certified in Java, SQL, Python By Spoken Tutorial Project at IIT Bombay
