Projects

Harvestify

An Integrated system for crop & fertilizer recommendation

Developed a machine learning-based web application that recommends optimal crops and fertilizers based on soil and environmental conditions. Integrated deep learning for plant disease detection using image inputs. The system enhances agricultural decision-making and promotes precision farming.

Student Enrollment Insight

Analyzed enrollment trends across various online courses using Python (Pandas, NumPy, Matplotlib), SQL, and MS Excel. Extracted key insights to understand student preferences and course popularity, aiding data-driven decision-making in e-learning platforms.

CerVer

Built a secure web portal leveraging blockchain technology to verify the authenticity of certificates. Enabled organizations to issue tamper-proof digital certificates and users to validate them easily, ensuring transparency and trust.
