Projects

Spotify Clone This project is a clone website of the popular music application of SPOTIFY. This project gives us a demo about the visuals, graphics and the system used by Spotify. The main purpose behind developing this Mini Project was to understand the working of the existing systems and the loopholes(if any) and also to check if there are any upgradations required in the existing system. September 2024

- Tools Used: HTML, CSS, Javascript, React

Fall Detection System (Wearable Iot Device) February 2025

- Enhanced an AI-powered fall detection system using MPU6050 sensors and NodeMCU.
- Processed real-time sensor data from MPU6050 sensors with NodeMCU, achieving a 95% fall detection accuracy and reducing false alarms by 30%, ensuring timely emergency alerts.
- Executed cloud-based data logging and remote monitoring

Certification

GEN AI Using IBM Watsonx

June 2025

Technologies

Languages: C, C++, Python, Java, HTML, CSS, JavaScript

Software: : Arduino, softwareSQL

Extracurricular Activities

- **Pariksha Pe Charcha 2022** - Active participation and valuable contribution to PPC 2022.
- **Event Management Volunteer** - Riviera Fest, VIT Vellore (Managed large and multiple overnight events)
