Linkedin Profile

EDUCATION

- **National Institute of Technology , Srinagar** (2021-2025)
Bachelor of Technology in Information Technology CGPA: 8.5
- **AVMD Institute, CBSE** (2020-2021)
XII Percentage: 92.6

EXPERIENCE

- **Quadb Tech Company** Remote
Blockchain Development Intern April'24-June'24
 - Built a blockchain-based DID system to issue and verify 500+ user identities via Ethereum smart contracts.
 - Used DIDs linked to wallet addresses for user autonomy and data ownership.
 - Applied digital signatures and hashing for tamper-proof validation. Cut identity spoofing risk by 35–40 %.
- **Kukbit Startup Lab Pvt. Ltd.** Remote
Frontend Developer Intern jan'23 - march'23
 - Developed an interactive e-commerce platform using React.js, optimizing load times by 25 % and improving navigation speed.
 - I have done state management that reduces the rendering time with 20 % .
 - Led UI/UX improvements that boosted user engagement by 30 % and increased session duration by 20 %

PROJECTS

Detection of Temporal and Spatial Locality

(C, C++)

- Currently developing software to analyze spatial and temporal locality in programs and recommend optimal cache sizes to reduce miss rates by up to 45 %.
- Built a custom cache simulator in C to model CPU behavior, tracking metrics like hit/miss rates and execution time.
- Simulated Conway's Game of Life using two algorithms (baselife and life) to demonstrate locality effects on cache performance.
- Benchmarked results showed notable gains in performance and memory efficiency with improved access patterns.

Privacy-Preserving Digital Identity Platform with Merkle Trees and Schnorr ZKPs

(MerkleTrees, Schnorr-style ZKP, Solidity, SHA-256 Hashing Standard , web3.js , Metamask, Ganache, Ethereum Testnet, HTML ,CSS)

- Designed and implemented a decentralized digital identity platform using blockchain and Merkle trees, incorporating Schnorr-style zero-knowledge proofs for strong privacy-preserving identity verification.
- Integrated lightweight, efficient Schnorr-based zero-knowledge proofs enabling secure, non-interactive verification directly in web browsers without revealing sensitive data.
- Built RESTful APIs and a user-friendly web interface to facilitate seamless identity management and third-party verification.

Helmet Detection for Bike Riders

(Python, OpenCV, PyTorch, YOLOv5, NumPy, Pandas, Matplotlib, Streamlit (for UI), SMTP (for email alerts))

- Developed a computer vision model using the Helmet Detection Kaggle dataset to accurately classify bike riders with and without helmets, achieving high precision in real-time scenarios.
- Integrated an alert system that automatically triggers notifications or alarms when a rider without a helmet is detected, enhancing road safety monitoring.
- Applied deep learning techniques (e.g., CNNs with YOLOv5 or MobileNet) for object detection and classification, optimizing the model for deployment in surveillance systems.

TECHNICAL SKILLS

Languages: C++ , C , HTML5 , CSS3 , solidity, MySQL , Python , Javascript

Frameworks/Tools: Git , Github , React , Jenkins , Numpy , Pandas , Matplotlib, PyTorch

Relevant Coursework: Operating System , DBMS , OOPS , Data Structures and Algorithms , Computer Networks , Artificial Intelligence , BigData ,Cloud Computing, Information Security , MachineLearning

ACHIEVEMENTS

- Solved 450+ Data Structures and Algorithms problems on CodeStudio, GeeksforGeeks, and LeetCode.
