EDUCATION

Haldia Institute of Technology

BTech - Computer Science and Engineering(AIML) - CGPA - 8.03

Sep 2021 – Jun 2024

Haldia, West Bengal

Global Institute of Science and Technology

Diploma - Computer Science and Technology - CGPA - 7.8

Aug 2018 – July 2021

Haldia, West Bengal

EXPERIENCE

Accenture

Mar 2024 – Apr 2024

Data Analytics and Visualization Job Simulation

Remote

- Cleaned and transformed large datasets by removing duplicates, correcting errors, and resolving inconsistencies to ensure accuracy, reliability, and readiness for analysis and reporting.
- Designed dashboards and visualizations using Excel and Power BI to highlight key metrics, uncover trends and support data-driven decision-making.

CodSoft

Jan 2024 – Feb 2024

Data Science Intern

Remote

- Developed and optimized four machine learning models, improving predictive accuracy through feature engineering and hyperparameter tuning.
- Conducted data preprocessing, exploratory data analysis (EDA) and model evaluation using Python libraries like Scikit-Learn, Pandas, NumPy and Matplotlib.

TECHNICAL SKILLS

Languages: Python, Java, SQL

DataBases: MySQL, MongoDB

Data Manipulation: Numpy, Pandas

Data Visualization: Matplotlib, Seaborn, MS Excel, Power BI

Cloud Platform: AWS(IAM, EC2, S3, ECR, VPC)

PROJECTS

EV Leasing Operations Dashboard with Power BI

- Developed a Power BI dashboard by integrating 150+ lines of SQL from four analysis scripts, visualizing EV leasing metrics like revenue, retention, and customer behavior, reducing manual reporting by 40% and improving insight delivery.
- Automated data transformation from orders and payments datasets, improving report accuracy by 25% and enhancing operational efficiency through dynamic Power BI dashboards that streamlined insights into customer behavior and sales performance.
- Created SQL-driven customer cohort and retention visualizations for over 7,000 customer records, revealing a 35% retention rate and guiding improved marketing and re-engagement strategies.

E-Commerce Sales Dashboard

- Design and implement an interactive and visually appealing e-commerce sales dashboard using Power BI
- Providing actionable insights into sales performance, customer behavior, and market trends.
- Added features like drill-downs, filters, and slicers to help users explore data in detail and gain valuable insights.

Thyroid Disease Detection

- Designed a machine learning model for thyroid disease detection, leveraging data preprocessing methods that streamlined analysis of 7 distinct biomarkers, ultimately leading to enhanced patient outcomes and improved treatment protocols.
- Spearheaded feature engineering processes that improved model reliability, resulting in a 10% accuracy boost; this enhancement empowered medical teams to make data-driven decisions with greater confidence and efficiency.
