

Career Objective

From writing code to writing solutions—transitioning from developer to business analyst with a user-first mindset.

Skills

- Requirement Gathering & Documentation (BRD, SRS)
 - Stakeholder Engagement & Communication
 - User Stories, Use Cases, Acceptance Criteria (Agile/Scrum)
 - Business Process Mapping (BPMN, Flowcharts)
 - Data Analysis & Visualization (SQL, Excel, Power BI)
 - Gap Analysis & Impact Assessment
 - Agile & Waterfall Methodologies
 - SDLC Understanding | Technical Background (Laravel, PHP, MySQL, Shopify)
-

Work Experience

1. Collaborated on *Easy Product Addons* and *Easy Variant Images* apps, gathering and refining requirements, improving feature clarity, and aligning technical development with business goals.
 2. Facilitated Shopify API integration and data synchronization, ensuring seamless communication between business needs and technical execution.
 3. Contributed to code refactoring discussions and optimization strategies from a business perspective, focusing on enhancing user experience and system efficiency.
 4. Supported the QA team in defining **test cases based on business requirements** to ensure feature completeness.
-

Key Achievements:

- Reduced requirement-related defects by 20% through improved documentation and early clarifications.
 - Acted as the functional SME (Subject Matter Expert) for multiple product features, ensuring alignment with user expectations.
 - Helped the product team with backlog grooming and prioritization during Agile sprints.
-
