☎ +91 9347083287 ✉ rajeshdabetta125@gmail.com  [linkedin.com/in/dabettarajesh/](https://www.linkedin.com/in/dabettarajesh/)

Education

Bachelor of Technology

Dec. 2020 – Jun. 2024

Vignan Institute of Technology and Science

Intermediate

Jun. 2018 – Mar. 2020

Pratibha Junior College

SSC

Jun. 2017 – Mar. 2018

St.John's High School

Technical Skills

Languages : Python, R, HTML, CSS, JavaScript, OOPs

Libraries/ Frameworks : NumPy, Pandas, Matplotlib, SciPy, Scikit-Learn, Django, React

Tools/ Platforms : Git, MS Excel, MS Word, MS PowerPoint, VS Code, PyCharm, Tableau, Jupyter Notebook

Databases : SQL, MySQL

Experience/ Internship

Machine Learning With Python internship | *Verzeo*

Jan 2022 - Feb 2022

- Gained hands-on experience with ML Algorithms like Linear Regression, Decision Trees, and K-Means Clustering etc.
- Learned data preprocessing and visualization using NumPy, Pandas, and Matplotlib to clean and analyze datasets.
- Built and evaluated models, improving accuracy through cross-validation and parameter tuning techniques.
- Applied concepts to real-world datasets, which helped me understand the end-to-end process of developing ML solutions.

Projects

Sales Insights Data Analysis Using SQL and Power BI | *SQL, Power BI*

- Analyzed AtliQ Hardware sales data using SQL to track product performance, regional trends and customer performance.
- Built interactive Power BI dashboards to visualize revenue, profit margins, and inventory turnover.
- Identified sales trends and top-performing products to guide strategic decisions.
- Optimized inventory management by aligning stock levels with regional trends demand patterns.

Implementation of Personal Fitness Tracker Using Python | *Python, NumPy, Pandas, Scikit-Learn, Streamlit*

- The Personal Fitness Tracker is developed using Python, leveraging libraries like NumPy and Pandas for data handling and analysis, and Matplotlib for visualizing fitness trends.
- Machine learning models such as SVM, Logistic Regression, and Random Forest are applied via Scikit-Learn to predict user fitness levels based on input metrics.
- Streamlit is used to create an interactive web application that allows users to input personal data and view real-time health insights. This system helps users monitor fitness trends and receive predictive insights to support healthier lifestyles.

COVID -19 Data Analysis Using Python and Tableau | *Python, NumPy, Pandas, Matplotlib, Jupyter Notebook*

- Covid-19 Data Analysis project leverages Python to analyze real-world data on infection rates, recoveries, deaths, and vaccinations using python libraries like NumPy, Pandas, Matplotlib .
- Focusing on cleaning and preparing the data to ensure accuracy and reliability for further analysis.
- Visualizing the trends in Covid-19 data, including the spread of infections and the effectiveness of containment measures and vaccination campaigns.
- Tableau is used to create interactive dashboards, making it easier to track patterns and assess the impact of containment measures. The goal is to provide meaningful insights into the virus's spread and its effect on different regions.

Certifications

- C Programming Essentials Certification – **Cisco**
- Python Programming Essentials Certification – **Cisco**
- Machine Learning with Python (Internship) – **Verzeo**
- Data Science Foundations Course Certification – **IBM**
- CCNA : Introduction to Networks Certification – **Cisco**

Achievements

- I have Participated in "Tata Imagination Challenge 2024" and received a Certificate of Merit.
- I have Participated in Naukri Campus "YOUNG TURKS" and received a Certificate of Merit.
