ABOUT

A Computer Science Engineering Graduate student specialised in AIML, with experience in data analytics and AI model development. Skilled in Python, SQL, and tools like Excel, Power BI. Proven ability to design intelligent systems and contribute to impactful research and tech-driven solutions.

EDUCATION

Bachelor of Technology, Computer Science Engineering SRM University, Amaravati Specialization: Artificial Intelligence and Machine Learning Points: [7.33/10]	September 2021- June 2025 <i>Andhra Pradesh, India</i>
Narayana e-techno school Class 10th Board GPA: 10/10	2019 <i>Bapatla, Andhra Pradesh</i>
Narayana Junior College MPC, Class 12th State Board 876/1000	2019-2021 <i>Kukatpally, Telangana</i>

SKILLS

Programming Languages	:C, C++, Java, Python, SQL
Specialized Technical Expertise	:AI, ML, Data Science, Deep Learning, Data Analytics, Business intelligence (BI)
Tools	:Excel, PowerBI, Tableau, Advanced excel, Pandas, Numpy

RESEARCH PAPERS

- Bitcoin Prediction using Machine Learning Algorithms** **August - December 2023**
→ Developed an LSTM model for predicting Bitcoin's closing price, achieving a high accuracy with an R square value of 99.5 percent and an MSE OF 0.002.

PROJECTS

- Face Recognition Smart Attendance System** **April 2024**
→ Developed a Smart Attendance System using Python, OpenCV, and Numpy for real-time face recognition, automating attendance with high accuracy and minimal human intervention.
- Training an AI in snake game using Reinforcement learning in machine learning** **May 2024**
→ Implemented Deep Q-Learning and Reinforcement Learning to train an AI agent for the Snake game, optimizing performance using Bellman's Equation to maximize cumulative rewards.
- Glaucoma detection using CNN fuzzy set** **November 2024**
→ Developed a glaucoma detection model using Convolutional Neural Networks integrated with fuzzy set theory to enhance classification accuracy in retinal image analysis.
- OMR sheet evaluation tool box** **December 2024**
→ Designed an OMR Sheet Evaluation Toolbox using image processing techniques to accurately detect and evaluate marked responses from scanned answer sheets.

● **Deep Learning Approach for Skin cancer classification and detection** **May 2025**

→ I used Deep Learning techniques to build a powerful skin cancer detection and classification system using different models. I have used all classification models and yolov5 to yolov8 models and got the highest accuracy for xception model.

CERTIFICATIONS & JOB SIMULATIONS

- **HackerRank Java Basic**
- **Deloitte Data Analytics**
- **Accenture Data Analytics and Visualization**
- **IBM Python 101 for Data Science Cognitive Class**

EXPERIENCE

● **Client Relations Lead - GenZ Clothing** **October 2024 - January 2025**
Remote Intern (Freelance) *Chennai, Tamil Nadu*

→ Responsible for managing client interactions, addressing inquiries, and enhancing customer satisfaction through effective communication in a dynamic e-commerce environment.

● **Research Intern - Universiti Teknologi Mara** **October 2024- April 2025**
Virtual Internship *Malaysia*

→ Developed a Digital Twin Model using 3D CAD, Ansys Work bench and static structural analysis, mathematical analysis to stimulate and analyze real-time system behaviour for predictive maintenance and performance optimization.

● **Head of Client Realtions - GenzClothing** **January 2025 - Present**
Remote Fulltime (Freelance) *Chennai, Tamil Nadu*

→ Leading end-to-end client communication, ensuring high customer satisfaction, and overseeing service coordination and support strategies in a fast-paced e-commerce environment.
