

Sathya

(a) SATHYANARAYANI VENKATASUBRAMANIAN

+91 9597478048 @ sathyanarayaniv@gmail.com Chennai

SUMMARY

Motivated and enthusiastic candidate seeking an entry-level position in the Information & Technology industry, Eager to apply and expand my technical, analytical, and problem-solving skills while supporting organizational growth and building a strong foundation for my career.

SKILLS

Python	IoT	SQL	Java Script	Power BI	Tableau	C;C++	Shell Script	HTML/CSS	GIT Hub
Core Java Basics	PHP Basics	.NET Basics	AI/ML Basics	MS-Office					

EDUCATION

- 2023 - 2025

●

Master of Computer Applications
91% - Assistant Faculty Member | MGR Educational & Research Institute - Chennai
- 2020 - 2023

●

Bachelor of Science in Information Technology
83% - Rotaract Club Coordinator | NGP Arts & Science college - Coimbatore

INTERNSHIP EXPERIENCE

- 2025

●

Data Analytics - Internship
Ybi Foundation
ISO 9001:2015 Certified - Educational Tech - Analytics Firm
 - During my internship at YBI Foundation, I gained hands-on experience by working on real-world projects alongside industry experts and mentors. The internship provided extensive exposure to live projects, advanced tools, and modern programming techniques
- Delhi, India

COURSES & CERTIFICATIONS

Python Certification- MSME	Introduction to AI - Infosys	Data Communication & Networking in IOT-Infosys
PHP-Beginner - Infosys	Fundamentals of Information Security - Infosys	

PROJECTS

IoT Product for Synergizing Smart Sensor for Comprehensive Chronic Disease Prediction

📅 2025 Chennai, India

Developed an IoT-based product aimed at early detection and prediction of chronic diseases by integrating smart sensors with cloud-enabled data analytics. The project involved designing and deploying a network of standalone sensors to continuously monitor patient health parameters (e.g., heart rate, blood pressure, blood glucose). Data from these sensors was transmitted in real time to a central IoT platform, where KNN algorithm analyzes trends and identify potential health risks. The system can be modelled to provided timely notifications for patients and healthcare providers, enabling proactive intervention and improved patient outcomes.

- Innovation:** Designed and implemented an end-to-end IoT prototype that showcased practical integration of sensors, communication modules, and analytics for healthcare applications.
- Accuracy:** Achieved over 90% accuracy in predicting potential chronic disease events during project simulations and testing.
Clinical Impact: Demonstrated how early detection through smart sensor data can improve healthcare outcomes and reduce emergency incidents.
- Technical Skills:** Gained hands-on experience in IoT architecture, sensor integration, data preprocessing, cloud platforms, and real-time alert systems.
- Recognition:** Project findings contributed to the publication of a research paper in the International Journal of Creative Research Thoughts (IJCRT), highlighting the project's impact and innovation.

PROJECTS

IoT Product for Epidermis Malignant Tumor Detection

📅 2023 📍 Coimbatore, India

Designed and developed an IoT-based system for early detection of malignant tumors in the epidermis (skin layer), leveraging smart devices and advanced image processing. The project integrates standalone portable sensors to monitor skin conditions, capture historical data of lesions, and use deep learning algorithms for real-time classification of skin tumors as benign or malignant

- **System Workflow:** Skin images are captured via IoT-enabled dermoscopic devices, which send the data wirelessly to a central platform for processing and analysis.
- **Analysis:** Deep learning model - CNN analyze the dermoscopic images for signs of malignancy, considering features like lesion shape, color, and texture.
- **Feedback:** Forecasts can be observed for enabling immediate intervention if suspicious lesions are detected.

KEY ACHIEVEMENTS

💎 **IoT : Research paper published at International Journal of Creative Research Thoughts (IJCRT)**
Product for Synergizing Smart Sensor with IoT for Comprehensive Chronic Disease Prediction

💎 **IoT : International Conference Presentation**
Product for Tactile recognition on sensor using IoT - CNN Model

DECLARATION

I hereby declare that the above-mentioned information is true to the best of my knowledge and belief.
-Sathyanarayani Venkatasubramanian
