SUMMARY

Versatile and motivated BTech student with a solid foundation in computer science and hands-on internship experience. Quick learner with strong problem-solving skills, adaptable to various tech roles across development, IT and cybersecurity.

EXPERIENCE

- Intern | SLB, Pune, India** Jan 2025 – Jun 2025
- Gained exposure to enterprise software systems, DevOps workflows, and internal tools for task and incident management.
 - Learned how large-scale tech operations support global infrastructure with a strong focus on reliability and safety.
- Intern | Edgematica (Remote)** Jun 2024 – Dec 2024
- Built interactive Power BI dashboards to visualize e-commerce sales, profits, and key performance metrics.
 - Gained hands-on experience in data transformation, business intelligence, and creating custom analytics reports.
- Intern | Tech Mahindra, Pune, India** Feb 2024 – May 2024
- Worked with L2 Operations Support for Temenos T24 Core Banking.
 - Gained exposure to COB (Close of Business) processes, incident resolution, service requests, and escalation handling.

EDUCATION

- Bachelor of Technology, Computer Science** | GPA: 8.01 Sept 2021 – Jun 2025
Vishwakarma University Pune, India
- HSC** | 84% Jul 2019 – Aug 2021
Nowrosjee Wadia College Pune, India
- CBSE** | 82% Mar 2018 – May 2019
Vidyashilp Public School Pune, India

TECHNICAL SKILLS

Languages: C, C++, Python, SQL, Mongo DB, Html/Css, Linux, JavaScript, PowerShell, Bash.

Certifications: Unstop: Power BI, Mongo DB, Python, JavaScript Es6. Coursera: Google cybersecurity, Linux and SQL, Networks and network security, Machine learning. LinkedIn Learning: Data Analytics, Cloud Computing.

PROJECTS

Glaucoma detection using Fundus Images(ML)

- Developed a machine learning model for automated glaucoma detection using fundus images, focusing on early diagnosis through image-based feature analysis.
- Applied image preprocessing and feature extraction to improve diagnostic accuracy.

ChatGPT clone

- Built a React-based chat application integrated with OpenAI's GPT-3.5 API for real-time AI responses, featuring dynamic messaging and a user-friendly interface.
- Designed an intuitive UI with dynamic messaging and responsive interaction handling.

Credit Card Financial Dashboard (Power BI)

- Developed an interactive Credit Card Financial Dashboard using Power BI integrated with PostgreSQL to analyze and visualize key financial metrics.
- Visualized key metrics such as spending trends, balances, and payment history

Password Strength Analysis Tool (Cybersecurity | Python)

- Created a Python CLI tool to evaluate password strength using entropy, pattern checks, and personal info detection.
- Includes crack-time estimation, strong password generator, and file scanning with redaction and SHA-256 hashing options.

Mini Projects (GUI Implementations)

- Designed a basic audio driver interface using Python and Tkinter for playback control.
- Developed a Python-based desktop application to lock and unlock system access with password authentication.
