Professional Summary

Results-driven Data Scientist with expertise in Python, SQL, Machine Learning, and Deep Learning. Experienced in Power BI, TensorFlow, and AI-driven solutions, with a strong focus on healthcare analytics. Adept at building predictive models, working with large datasets, and delivering actionable insights to drive business success. Passionate about solving complex data challenges and deploying scalable solutions.

Technical Skills

- Programming: Python, SQL, Django
- Data Science: Pandas, NumPy, Scikit-Learn
- Machine Learning: Supervised & Unsupervised Learning, Deep Learning (CNN, ANN, LSTM)
- AI & NLP: Generative AI, LangChain, TensorFlow, Keras
- Data Visualization: Power BI, Matplotlib
- Soft Skills: Problem-Solving, Adaptability, Flexibility

Education

Bachelor of Pharmacy | Dr. Babasaheb Ambedkar Technological University

CGPA: 8.41 (2021 - 2024) | HSC: 73.08% | SSC: 83.80%

Experience

Data Science Intern | CodeSpyder Technologies Pvt. Ltd (Aug 2024 – Mar 2025)

- Built and optimized predictive models using ANN, CNN, and NLP.
- Conducted data preprocessing, exploratory analysis, and hyperparameter tuning.
- Utilized Python, TensorFlow, and SQL to extract insights and improve model performance.

Projects

Medical Chatbot - Generative AI

- Built a chatbot using LangChain, PyPDF, and Hugging Face API.
- Solved text-to-embedding conversion issues.
- Integrated NLP techniques to improve response accuracy.

Next Word Prediction - NLP (LSTM Model)

- Developed an LSTM model for text prediction.
- Implemented tokenization and sequence modeling.
- Trained on large datasets for better predictive accuracy.

House Price Prediction - Machine Learning

- Used Random Forest Regression to predict house prices.
- Trained on historical data, considering factors like location, size, and amenities.
- Achieved high accuracy and improved pricing estimations for real estate analysis.

Digit Recognition - CNN

- Developed a CNN model for handwritten digit classification.
- Achieved 90% accuracy using convolutional layers.
- Optimized the model using data augmentation techniques for better performance.

Certifications & Achievements

- Python and SQL for Data Science (Great Learning)
- Full Stack Data Science Course (CodeSpyder, 5 months)
- Kaggle Competition Participant
- HackerRank 5-Star in Python
