SUMMARY

To build a strong career in the AI and Machine Learning field by using my knowledge of computer science and software development. I am passionate about working with AI technologies, ML models, and LLMs to create smart and useful solutions. I aim to keep learning, improve my skills, and contribute to innovative projects in a fast-growing tech environment. I am looking forward to opportunities that help me grow and build my career in this domain.

SKILLS & INTERESTS

- Programming Languages: Python, SQL
- AI framework and libraries: NumPy, Pandas, Pytorch, HuggingFace, SciKitlearn.
- Technologies: NLP, Machine Learning, LLM, RAG, Gen AI
- Tools: Git, Jupyter Notebook, Visual Studio
- Cloud Platform: Azure

EXPERIENCE

Backend Python Developer

Jan '25 — Mar '25

Athmick.AI

Bangalore , India (Remote)

- Worked with the development team on an AI-based hiring platform to filter and rank resumes using ML and NLP models
- Implemented new features like candidate emotion detection, background person detection, filler word filtering, and grammar checks during interviews
- Used machine learning and natural language processing (NLP) techniques to enhance report analysis and candidate evaluation.
- Actively tested and evaluated the AI-hiring platform to ensure smooth performance and good user experience. Reported bugs, analyzed issues, and created POCs (Proof of Concepts) to suggest solutions

Python Developer

Sep '23 — Nov '24

i2e Consulting

Mumbai, India (Remote)

- Worked with development team to designed and developed a Retrieval-Augmented Generation (RAG) chatbot by integrating retrieval-based and generative AI models, enhancing accuracy and responsiveness
- Leveraged Large Language Models (LLMs) such as GPT-3 and ChatGPT for diverse applications, including content creation, text completion, and creative writing
- Integrated pre-trained models from Hugging Face into AI applications, significantly reducing development time while enhancing model accuracy
- Utilized frameworks such as LangChain and LlamaIndex to build context-aware conversational agents and knowledge-based systems
- Created comprehensive technical documentation detailing system architecture, workflows, and integration processes to support maintainability and knowledge transfer
- Provided technical support for ERPNext projects, focusing on issue identification, root cause analysis, and effective resolution of client-reported problems

Software Developer Trainee

Mar '22 — Jun '23

Data Entrega

Pune, India (Remote)

- Developed Python applications with database integration for data warehousing solutions
- Utilized WhereScape RED for streamlined data warehouse development, integrating with Amazon S3 and REST APIs.
- Employed POSTMAN for data extraction in multiple formats
- Worked with ETL tools for efficient data extraction, transformation, and loading (ETL)
- Hands-on experience with Microsoft SQL Server for database design, query optimization, stored procedures, and performance tuning

EDUCATION

Bachelor of Engineering, RTMNU University, Nagpur (GPA: 8.04)

Jun '17 — Aug '21

Wardha, India

- Computer Engineering

CERTIFICATIONS

Post Graduate Program in Data Science, Imarticus Learning

Azure AI Fundamentals (AI-900), Microsoft
