SKILLS

- Statistical Modelling, EDA, Tableau, SQL, Matplotlib, Pandas, Prompt Engineering, Google Colab, SeaBorn

EXPERIENCE

Market Research Associate

Jan 2024 - Mar 2025

xResearch.biz

Conduct in-depth primary (surveys, interviews) and secondary research (industry reports, paid databases) across diverse sectors and niche industries to support strategic business decisions.

Analyze market trends, consumer behavior, and competitive landscapes at both global and regional levels to identify growth drivers and key challenges.

Deliver client-ready reports with clear recommendations, supported by data visualizations using Excel (charts, pivot tables) and PowerPoint presentations.

Present insights to internal stakeholders and clients, strengthening communication and stakeholder management skills. Manage and prioritize multiple research projects simultaneously, ensuring timely and high-quality delivery.

Contribute to go-to-market strategies, product launches, and marketing plans by aligning research outcomes with business objectives.

Collaborate with clients via email and meetings to gather requirements and deliver customized research solutions, enhancing client satisfaction.

[Tools: Microsoft Excel, PowerPoint, MS Word, Google Sheets.]

PROJECTS

Risk Analysis & Fraud Detection in Loan Applications

🔗 <https://medium.com/@akashprasadoofficial/data-driven-risk-analysis-fraud-detection-in-loan-applications-sql-and-tableau-3e912d867fc7>

Analyzed around 50,000 loan applications using SQL and Tableau in order to detect behavioral fraud patterns and risk indicators. Built a fraud detection framework that explores patterns based on user demographics, financial ratios, and geography and identifies high-risk applicants using scoring rules.

Formed a risk indicator based on debt to income ratio (DTI) and loan to income ratio (LTI) and further analyzed the dataset on state and city level combining with age group and purpose of loan, in order to get a view of the applicants who are more likely to do fraud.

Identified that among 50,000 applicants there is ~2.05% fraud applications from which Chhattisgarh (~2.87%) was top among all the states followed by Rajasthan(~2.83%) & Odhisha(~2.76). Moreover, fraud risk was highest among the young' and 'very old' group, may be due to low experience or lack of detailed scrutiny.

Customer Segmentation using RFM (Recency, Frequency & Monetary) Modelling

🔗 <https://medium.com/@akashprasadoofficial/customer-segmentation-with-rfm-recency-frequency-monetary-modeling-sql-tableau-8454f6518854>

Applied RFM Modeling to a retail dataset with 375,000+ rows using SQL for transformation & Tableau for interactive visualization. Validated the data completeness with null and duplicate checks.

Created percentiles (20, 40, 60, 80, 100) based on recency (with a reference date), frequency and monetary respectively. Moreover, built a dynamic RFM scoring that categorized customers based on their RFM score and further labelled each of them, enabling the increase in engagement through personalized targeting.

Revealed that ~58% of the revenue is coming from Champions, they can be rewarded with coupons. Whereas, Lost segment is generating the lowest ~0.005%, they are required to revive interest with reach out campaigns.

A/B Testing Case Study

🔗 <https://medium.com/@akashprasadoofficial/a-b-testing-case-study-digging-deeper-than-just-conversion-rates-sql-tableau-1145ded5c0cf>

Conducted an A/B test analysis on more than 290,000 records using SQL to compare old vs. new landing pages among group types including control and treatment.

Cleaned and validated the records by filtering misaligned control-treatment assignments, improving test integrity and insight quality.

Identified that the conversion rate was ~11.88% and revealed that highest conversion rate (~12.21%) was between the Q3 time zone (30-45 mins).

EDUCATION

Maulana Abdul Kalam Azad university of Technology

2018 - 2021

Bachelor in Business Administration (BBA) | 8.07 CGPA
