EDUCATION

RV College of Engineering

B.E in Electrical and Electronics Engineering

Bangalore, India

Dec 2021 – Aug 2025

PROFESSIONAL EXPERIENCE

CodeAlpha

Software Developer Intern

(Remote)

- Developed a RESTful API using Spring Boot, resulting in a 15% improvement in data retrieval speed.
- Implemented core application services with Spring Boot and Spring Data JPA, exposing endpoints to front-end clients and third-party systems.
- Managed database operations, optimized SQL queries, and resolved front-end compatibility issues to ensure application stability.

Build for Web3 – Bobdao

Nov 2022 – Dec 2022

Web3 Intern

- Conducted exploratory blockchain analysis on the Ethereum network to identify whale-accumulation and trading patterns.
- Built an end-to-end ETL pipeline for extracting, transforming, and loading large-scale blockchain transaction data for market analysis.
- Developed and deployed Solidity smart contracts for decentralized data collection and on-chain storage.
- Utilized IPFS for decentralized storage and distribution of large datasets, ensuring data integrity and accessibility.

PROJECTS

Stress Detection Model using Machine Learning | *Python, Scikit-Learn*

- Developed a machine learning model to accurately detect stress levels based on physiological and behavioural data
- Contributed to improving mental health and early stress detection and intervention
- Demonstrated strong problem-solving and analytical skill in addressing complex challenges related to mental health
- Leveraged machine learning techniques (e.g., Random Forest, Decision tree, KNN, Logistic Regression) to develop a predictive model for stress detection

Personalised Fitness Platform | *React, Spring Boot, PostgreSQL*

- Developed a full stack web application providing personalised workout plans, nutrition guidance and a supportive community
- Designed and developed a user friendly interface focusing intuitive navigation and engaging user experience

Wind Power and Speed Prediction Model | *Python, TensorFlow, Keras, Time Series Analysis*

- Developed a machine learning-based model capable of accurately predicting wind power and speed, enabling more efficient and reliable wind energy generation
- Selected appropriate machine learning algorithms (e.g., regression models, time series models, deep learning models) based on the nature of the data and prediction task
- Utilized advanced machine learning techniques to achieve high prediction accuracy

TECHNICAL SKILLS

Programming Languages: Python, SQL, Java, JavaScript, HTML, CSS

Frameworks: Spring Boot, Hibernate, React.js

Databases: MySQL, PostgreSQL

Tools: Git, AWS, Docker, Maven, IntelliJ IDEA

HACKATHONS

- **Flipkart GRID 6.0** — Ranked in top 4% among 500,000+ participants.
