Projects

Retail Sales Analysis Using SQL

- Designed and executed SQL queries to analyze sales data across multiple retail stores and product categories, employing principles from Data Science and Data Modeling to provide insights for decision-making.
- Performed data cleaning, data mining, transformation, and aggregation to uncover insights on sales trends, seasonal patterns, and regional performance while embracing a Mining approach to extract valuable information.
- Created KPIs such as total revenue, average order value, and customer purchase frequency, focusing on critical metrics that drive decision-making.

Blinkit data Analysis Using Powerbi

- Developed interactive Power BI dashboards to visualize Blinkit's order, delivery, and customer data for real-time business insights.
- Connected and transformed raw data using Power Query to model relationships between products, regions, and customer behavior.
- Created DAX measures to track KPIs such as average delivery time, order volume, revenue trends, and cancellation rates.
