## OBJECTIVE

Cloud computing and DevOps enthusiast with expertise in CI/CD pipelines, Docker, Kubernetes, and cloud technologies, aiming to deliver scalable and efficient solutions.

## EDUCATION

**Bsc (Cs) Christ University**

**HSC Vidya Bhavan Jr Clg**

**SSC St.Joseph Boys High School**

## COURSE

### AWS DEVOPS ENGINEER

Aug 2024 – Jan 2025

- Completed AWS DevOps Engineer Certification Course
- Gained hands-on experience with core DevOps and AWS services, including:
- CI/CD Pipelines: Built automated deployment pipelines using AWS CodePipeline, CodeBuild, and CodeDeploy.
- Infrastructure as Code: Deployed and managed resources using AWS CloudFormation and Terraform.
- Monitoring & Logging: Implemented monitoring with Amazon CloudWatch and AWS X-Ray.
- Containerization: Worked with Docker and deployed containerized applications using Amazon ECS and EKS.
- Automation & Scripting: Automated workflows using Python and shell scripts.
- Security Best Practices: Applied IAM policies and roles to ensure secure infrastructure access.

## PROJECTS

- Project 1 : DevOpsified Project
- Used AWS services like ec2 load balancing, auto scaling, S3, IAM, VPC, VPC peering, ECS, RDS, created S3 buckets in AWS environments to store files.
- Performing both manual and automation build using Maven, GIT and Jenkins automating build process for creating JAR /WAR artifacts using Maven.
- Installation, Configuration ,Troubleshooting and maintenance of Tomcat server.
- Configured the docker containers using docker images created docker images using docker container and docker files
- having good experience in working with docker volumes and Port mapping using those docker images in running Kubernetes
- Scheduled particular builds to be triggered using build periodically and Poll SCM setup code repositories like Git set up
- and walked with ansible written playbooks and roles and used Adhoc commands and modules in ansible for configuration management on remote servers
- Configured and deployed application in various work environments like development, Test UAT and Production
- Setting up of Jenkins creating jobs from scratch involved in creating CI/ CD pipeline for the application .backup and restore of Jenkins using plugins performed automatic build and deployment using Jenkins. Jenkins master and slave
- configuration setting up of slave nodes using manage nodes. Automatic triggering of jobs by using Poll SCM & build periodically.
- Establishing and running the process for ongoing maintenance monitoring support using elastic search, fluentd kibana

### Project 2 : Web application Hosting

- Hosted static and dynamic web applications on Aws leveraging cloud services for scalability and reliability.
- Utilized AWS services like EC2, S3, and Elastic Beanstalk, with Apache HTTPD and NGINX for optimized web server configurations.
- Delivered secure, high-performance web hosting solutions by adhering to cloud best practices for security, optimization, and cost efficiency.

**Project 3 : Creation of a production ready infrastructure using Terraform and configuration management using Ansible for Multi-Tier Deployment with remote backends .**

- This project focuses on using Terraform to create a scalable and
- production-ready infrastructure on AWS and managing its configuration using Ansible.
- It includes setting up remote backends for state management in Terraform and implementing a multi-tier application architecture.
- Learners will gain hands-on experience in infrastructure automation and configuration management, essential skills in modern cloud environments.
- Tools Required: Terraform: For infrastructure as code to build, change, and version Infrastructure efficiently.
- Ansible: For configuration management and application deployment.
- AWS Services: Various services for hosting the infrastructure (like EC2, RDS, S3, etc.).
- Any code editor (like Visual Studio Code, Atom, etc).

## SKILLS AND INTRESTS

---

**Programming & Scripting Languages : Python, Bash, Shell, Embedded C.**

**DevOps Tools: Docker, Kubernetes, Jenkins, GitHub ,Terraform, Ansible, SonarQube ,Maven**

**Database : SQL Queries.**

**Cloud Platform : AWS.**

**Version Control System : Git , GitHub , Bitbucket.**

**Soft Skills : Critical thinking, Data-driven decision making, Project ownership.**

## CERTIFICATIONS

---

- C++ Certification
- AWS Certification
- Devops Certification
- Full stack Certification
- Python Certification

## Extra-Curricular and Leadership Activities

---

- Winner Bgmi Esports Tournament in Christ College in the year 2024
- Secured 1<sup>st</sup> place in the inter College Bgmi tournament Competing against 25 teams
- Demonstrated strategic planning, teamwork, and quick decision-making under high-pressure situations.

## HOBBIES AND INTERESTS

---

- Cricket
- Travel
- Music
- Football
