ABOUT ME

I AM A PASSIONATE AND DRIVEN INDIVIDUAL WITH A KEEN INTEREST IN LEVERAGING DATA-DRIVEN INSIGHTS TO TACKLE COMPLEX CHALLENGES AND DRIVE MEANINGFUL CHANGE. AS A RECENT **MASTERS IN MATHEMATICAL STATISTICS** WITH A STRONG FOUNDATION IN **STATISTICAL TOOLS, MACHINE LEARNING, AND PROGRAMMING**. I BRING A FRESH PERSPECTIVE AND STRONG FOUNDATION IN **DATA ANALYSIS**. I AM MOTIVATED TO TACKLE COMPLEX DATA CHALLENGES AND CONTRIBUTE TO INNOVATIVE SOLUTIONS. EXCITED TO APPLY MY KNOWLEDGE IN PROFESSIONAL SETTING.

EXPERIENCE

Assistant MIS Executive (Study Smart Overseas Education)	10/2024-PRESENT
- Assisted in the management and maintenance of Management Information System (MIS) for the company. - Supported data collection, Analysis and presentation using tools like Excel and Power- Bi. - Collaborated with other departments to ensure accuracy and timeliness of reports - Ensured that MIS reports met quality and compliance standards.	
POWER BI ANALYST INTERN (Niri Global Services)	06/2024 – 08/2024
- Developed and maintained interactive dashboards and reports using Power BI to support data-driven decision-making across departments. - Supported data collection, Analysis and presentation using tools like Excel and Power- Bi. - Cleaned and transformed raw data using Power Query and DAX (Data Analysis Expressions) for accurate visualizations. - Collaborated with cross-functional teams to gather requirements and ensure alignment between business goals and reporting solutions.	
DATA SCIENCE INTERN (IANT)	05/2023 - 11/2023
- Assisted in the collection, cleaning, and preprocessing of large datasets from various sources to prepare them for analysis. - Performed exploratory data analysis (EDA) using Python (Pandas, NumPy, Matplotlib, Seaborn) to identify trends, patterns, and anomalies. - Built and evaluated predictive models using machine learning algorithms such as Linear Regression, Decision Trees, and K-Nearest Neighbours. - Conducted feature engineering and selection to improve model performance and interpretability. - Created dashboards and reports to visualize findings using Matplotlib, Seaborn, and Plotly for presentations to internal teams.	

EDUCATION

Master of Science (MSc), STATISTICS	(2022-2024)
MODERN COLLEGE OF ARTS, SCIENCE AND COMMERCE, PUNE CGPA: 6.71	
Bachelor of Science (BSc), STATISTICS	(2019-2022)
M.E.S. ABASAHEB GARWARE SENIOR COLLEGE, PUNE CGPA: 8.35	
Higher Secondary School Certificate (HSC)	(2018-2019)
HHCP GIRLS HIGH SCHOOL & JUNIOR COLLEGE, PUNE PERCENTAGE: 64.77%	
Secondary School Certificate (SSC)	(2016-2017)
JIJAMATA ENGLISH MEDIUM SCHOOL, BHOR PERCENTAGE: 81.20 %	

SKILLS SUMMARY

Technical Skills: Python | R Programming | Power BI | MySQL | Advanced-MSEcel | BASE SAS| Minitab |Mat-lab | Microsoft Office
Python Libraries: Pandas | Numpy | Matplotlib |Seaborn |Stats-model API |Scikit-Learn |Object Oriented Programming
Other Skills: Machine Learning |Statistical Modelling | Data Mining |Data Visualization

CERTIFICATIONS

o Data Science

In a Data Science course, I gained proficiency in programming languages like Python and R, along with key libraries such as Pandas, NumPy, and Matplotlib for data analysis and visualization. I developed strong skills in data preprocessing, cleaning, and transformation, as well as statistical analysis and hypothesis testing. I gained hands-on experience with machine learning algorithms (supervised and unsupervised) and model evaluation techniques. Additionally, I became proficient in SQL for data querying, learned data visualization techniques using tools like Power. This training has equipped me to solve complex problems and deliver data-driven insights.

PROJECTS

POWER BI SALES DASHBOARD OF YEAR 2022

Self-Work (Apr 2024)

- Power BI dashboard designed to visualize and analyze sales data. The dashboard provides insights into key sales metrics and trends, helping stakeholders make informed decisions.
- Data Cleaning: Raw data was cleaned and transformed using Power Query Editor within Power BI Desktop.
- Modeling: Relationships and measures were defined to support interactive analysis.
- Features:
 1. Sales Overview: Summary of total sales, revenue, and profit.
 2. Sales by Region: Breakdown of sales performance across different regions.
 3. Product Analysis: Analysis of top-selling products and their contribution to revenue.
 4. Time Series Analysis: Trends in sales over time (daily, weekly, monthly).
 5. Customer Segmentation: Analysis of customer demographics and buying behavior.

CLASSIFICATION OF 10-YEAR RISK OF FUTURE CORONARY HEART DISEASE(CHD)

Self-Work (Feb 2024)

- I apply my skills in real-world scenarios, I undertook a Machine Learning project to delve into the intricacies of data of Cardiovascular Heart Disease. The project utilizes a comprehensive dataset comprising demographic information, clinical metrics, lifestyle factors and medical history of a large cohort of patients.
- Initially, Exploratory Data Analysis was performed to understand data. Several machine learning algorithms such as logistic regression, KNN, decision trees, random forests, Ada-boost, Bernoulli Naive Bayes, support vector machines were trained and evaluated.
- The models were evaluated using performance metrics like accuracy, precision, recall, and F1-score through techniques such as cross-validation to ensure robustness and generalization. According to Accuracy KNN was best fitted model.
- By prediction it was concluded that, risk of heart disease in next 10 years will be less.

THE STUDY OF TRADITIONAL AND NON-TRADITIONAL FUEL

Academic Project

- As a Team of 3 this Project delves into comparative analysis of Traditional fuels like Petrol, Diesel and LPG and Non-Traditional fuels like CNG & electric Vehicles. Understanding the nuances of Petrol, Diesel and LPG is crucial in navigating the complex landscape of fuel choices, considering factors like energy efficiency, emissions and their respective roles in sustainable transportation.
- Month wise Data of 23 years was collected from official website of RTO. Timeseries models like Exponential Model, Holt-Winter, ARIMA, ARMA, AR & MA were used. Trends, patterns, seasonality and stationarity was deal in right way..
- By predicting count of all fuels in next five years we came to conclusion that it is not possible to replace Traditional Fuels by Non-Traditional Fuels
