Objective

To work in an environment which encourages me to succeed and grow professionally where I can utilize my skills and knowledge appropriately.

Experience

- Q Connect** 21/03/2024 - 12/04/2025
Technical Support
At Q connect Company, I provided support services for Tata motors Company, assisting with customer inquiries, troubleshooting technical issues, and ensuring smooth day-to-day operations we used Siebel Application for resolve tickets.
- Mogora cosmic pvt Ltd** 18/01/2023 - 18/02/2023
Intern
Mogora cosmic is electronics company we learnt about assembly and the get knowledge of electronics components.

Education

- Someshwar Vidyalaya Ghatnandur** 2017
SSC
- Jodhaprasadaji Modi Jr college** 2019
HSC
- Dr DY Patil Institute of Technology** 2023
BE E&Tc
7.8/10

Skills

- Python
- SQL
- Excel
- Oops

Projects

- Intelligent Irrigation and Fencing using IOT**
We create a project this project based on the agricultural. As we know the most important part is to give watering to the crops farmers give water to the plants but some time the water level of crop is over so the crops get destroyed due to over water so we do some intelligent ideas by using soil sensor to protect the crops also in our concept there is fencing but when we research on the fencing then we have to face many controversies for the fencing so we decided to put fencing in future scope and instead of fencing we start researching on plant disease detector so with the help raspberry Pi we did a project to discover the plant disease and by using our concept the farmers is living in benefits the plant disease detector will help to the farmers very much..
- Flood Alert System**
The Flood Alert System is designed to monitor water levels using a sensor and to provide alerts when the water level exceeds a certain threshold. The system uses an Arduino UNO as the main controller, interfaced with a Water Level Sensor for detecting water levels, a SIM800L GSM Module for sending SMS alerts and making calls, and an LCD Display for real-time water level display. The Arduino UNO is programmed to read the water level, display it on the LCD, and use the GSM module to communicate alerts.

Languages

- English,Hindi,Marathi
