Education

R.N.S Institute of Technology, Bengaluru <i>B.E in Information Science Engineering (CGPA: 8.25)</i>	<i>Dec 2021 – Jun 2025</i>
Jain International School, Nagpur <i>Class XII (Percentage: 83%)</i>	<i>Apr 2020 – Jun 2021</i>
K.V Vayu Sena Nagar, Nagpur <i>Class X (Percentage: 91.4%)</i>	<i>Apr 2018 – May 2019</i>

Projects

Fuel Consumption Prediction using Tensorflow <i>Linear Regression, Decision Tree Regression, Random Forest Regressor</i>	<i>Sept 2024 – Dec 2024</i>
- Identified nine key trends and patterns in vehicle fuel consumption through statistical methods and EDA, informing the development of predictive modeling strategies and powertrain optimization recommendations. - Enhanced fuel consumption forecast reliability through algorithm optimization, specifically decreasing Mean Absolute Error(MAE) by 18%, which accelerated powertrain optimization recommendations by 15%. - Partnered with data scientists and software engineers to seamlessly integrate predictive models into existing systems, ensuring enhanced deployment and functionality across platforms, which improved overall system performance by 20%.	
Online Courier Management System <i>MySQL, HTML, CSS, PHP</i>	<i>Jan 2024 – Mar 2024</i>
- Completed 15 real-world challenges with a 90% success rate. Mastered SQL querying techniques, boosting data processing efficiency by 35% for faster courier data retrieval and manipulation. - Deployed machine learning algorithms on Google Cloud to enhance prediction accuracy related to delivery times and package tracking, achieving a 25% improvement in forecast reliability. This resulted in better resource allocation and customer satisfaction. . - Maximized data processing pipelines, leading to a 40% reduction in processing time. Developed automated dashboards that improved data visualization efficiency by 50%, enabling stakeholders to access real-time insights and make informed decisions quickly.	
Train Reservation System <i>Linked List, Queue</i>	<i>Oct 2023 – Nov 2023</i>
- System Development: Designed and implemented a Train Reservation System utilizing Innovated lists to ensure efficient data management, allowing for quick access and modification of reservation data, optimizing retrieval times by 40%. - User-Centric Design: Focused on creating a user-friendly interface that simplified the booking process, enhancing overall user experience and increasing user satisfaction by 20%. - Engineered real-time seat booking feature utilizing Resolved lists, accommodating 100 concurrent users with 99.9% accuracy in preventing overbooking, improving user satisfaction scores by 20%.	

Skills

Languages: C/C++, Python , HTML, CSS, JavaScript
Technologies/Frameworks: React.js, Node.js, MySQL

Certifications

- AWS Academy Cloud Foundation
- A.I Foundation Certification(Infosys Springboard)

Extracurricular

- College Football Team: Runner's Up (VTU Inter College-2023)
