Profile

Data Analyst with a strong foundation in data engineering and AI automation, possessing hands-on experience in developing scalable data pipelines, automating workflows, and delivering actionable insights. Proficient in Python, SQL, Power BI, and Excel, with a keen interest in transitioning into the financial sector to optimize data-driven decision-making processes.

Professional Experience

Software Engineer AttributeX Solutions LLC.	02/2025 – Present Remote
- Automated Excel-based reporting for real estate valuation models using Python and pandas, eliminating 40% of manual data entry and reducing report generation time by 50%. - Designed and implemented a data ingestion pipeline to extract, transform, and load (ETL) data from multiple Excel files into a MySQL database. - Developed AI-based automation tools using OpenAI APIs and workflow scripts to reduce manual operations across NRI PropTech Platform.	
Graduate Engineer Trainee KPIT Technologies	09/2024 – 12/2024 Bengaluru
- Optimized memory usage in embedded C software for automotive ECUs by 20%. - Participated in Agile sprints and used Python-based automation scripts, reducing test cycle time.	

Education

B.Tech CSE with specialisation in AI and ML Vellore Institute of Technology CGPA: 8.56/10	2020 – 2024
12th Tirumala Junior College Visakhapatnam Percentage : 95%	2020
10th(ICSE) Good Shepherd EM School Visakhapatnam Percentage : 88%	2018

Skills

Programming Languages Java, Python, SQL	Data Visualisation Tools Power BI, Tableau
Data Tools & Platforms Apache Airflow, MySQL, AWS (S3, Lambda)	Data Analysis ETL/ELT processes, Data Warehousing
Other Tools Excel (Advanced: PivotTables, VLOOKUP, Macros), CI/CD Pipelines , n8n	

Project Experience

Credit Card Fraud Detection Analysis - Machine Learning	11/2023 – 05/2024
• Developed a hybrid machine learning solution using ensemble techniques (Random Forest, XGBoost) to detect fraudulent transactions in highly imbalanced financial datasets. • Implemented SMOTE and undersampling techniques to improve class balance, leading to a boost in model accuracy from 78% to 93.5% and reduction in false positives to 22%. • Created Power BI dashboards for visualizing fraud trends across time and geolocation, helping financial analysts assess emerging risk patterns.	

Plant Disease Detection using flask - Machine Learning	05/2023 – 08/2023
• Designed a Flask-based full-stack web application with a deep learning backend using CNN to identify plant diseases from leaf images. • Collected and preprocessed over 30,000 images using OpenCV (resizing, contrast enhancement, augmentation) for robust model training. • Trained and optimized a TensorFlow-based CNN achieving 92.7% accuracy and 89.5% precision across 38 disease categories.	

Certification

• Microsoft Power Platform Fundamentals Certified.	• AI Externship Powered by Google - Smart Internz.	• Fundamentals of Data Analytics - FutureSkills Prime.
• Applied Machine Learning in Python -Coursera.
