About Me

- A fast learner with a sharp problem-solving mindset, I'm passionate about machine learning and committed to developing intelligent systems that adapt and evolve with real-world challenges. My ability to understand systems deeply—from core concepts to practical implementation—gives me an edge in designing efficient, reliable solutions. Leading my university's handball team has strengthened my leadership, teamwork, and decision-making skills under pressure—qualities that translate directly to dynamic and fast-paced tech environments. I thrive on challenges, enjoy simplifying complex problems, and am always eager to explore innovative, data-driven solutions. Driven, adaptable, and continuously learning, I'm ready to contribute to building intelligent, resilient, and forward-thinking systems.

Education

- **Amrita Vishwavidya peetam** Banglore, India
Bachelor of Technology - Electronics and Computer Science Engineering; CGPA: 7.62 2021 - 2025
- **Narayan Junior College, Hyderabad** Telangana, India
MPC ; Percentage/CGPA: 95% 2019 - 2021
- **DR Kkr Goutham School, Hyderabad** Telangana, India
CBSE; Percentage/CGPA: 84% 2018 - 2019

Skills

Languages and Course Work: Verilog, SQL, Python,Oops(concepts) Matlab

Tools : Google Collab, Dsch2, Microwind, Virtuoso, Arduino IDE

Soft skills : Team Management,Effective Communication,Time Management,Problem-Solving

Projects

- **Breast Cancer Prediction using ML :**
- Utilized Python and machine learning techniques, including logistic regression, to analyze and classify the tumour using wisconsin dataset, a classic dataset in the field of machine learning, achieving a test set accuracy of 94.73
- This model Predicts if the tumor is Benign or Malignant using Logistic Regression after selecting the best features of a dataset.
- Technologies and Tools used - Python, Pandas, NumPy, Scikit-learn,Google Collab
- **Efficient Approximate Multiplier Design using Approximate 4:2 compressor for error tolerant application :**
- Developed an energy-efficient approximate multiplier using a novel 4:2 compressor, achieving reduced power consumption and improved accuracy. Optimized hardware complexity while balancing computational efficiency for error-tolerant applications. Applied the design to image processing and DSP, demonstrating its effectiveness in low-power, high-performance computing.
- Designed and implemented an energy-efficient approximate multiplier using a novel 4:2 compressor, achieving 22.75 percent of power saving.
- Technologies and Tools used - jDoodle, Vivado,Google colab
- **Evaluating Machine Learning Algorithms with Feature Selection for Cybersecurity: A Case Study on Pegasus Spyware :**
- Evaluated machine learning algorithms with feature selection for Pegasus spyware detection, achieving 97.7 percentage accuracy using Random Forest on synthetic data in a cybersecurity case study.
- Technologies and Tools used - Google Collab

Certifications

- **Evaluating Machine Learning Algorithms with Feature Selection for Cybersecurity: A Case Study on Pegasus Spyware :** 2025 10th International Conference on Signal Processing and Communication (ICSC) .
- **VLSI Design flow RTL-GDS(Nptel):** Learned how the vlsi design flow happens from RTL-GDS.
- **VLSI Design and Verification(Currently pursuing)(Maven silicon):** Learning Digital design using verilog and verification using system verilog

Awards

- **Game(Handball) :**
- Participated in South Zone Inter University tournament organized by Periyar University,Salem.(2022-2023)
- Participated in south zone inter university tournament organized by Mahathma Gandhi university,Kottayam,kerala (2023-2024)
