

Career Objective: Detail-oriented QA Analyst with strong knowledge of functional testing, SQL, and defect management. Passionate about ensuring software quality through rigorous testing and analysis. Seeking to contribute my skills to the QA Analyst role at [Company Name], where I can help maintain and enhance product quality.

Academic Record

Year	Degree	University(Board)	CGPA /%
2023	BCA	MMDU	9.55
2020	XII	ICSE	67%
2018	X	ICSE	73%

Experience

Cognizant

Programmer Trainee

Present

Coimbatore, India

- Participated in functional, regression, and integration testing of software products, ensuring alignment with business requirements.
- Reviewed and analyzed design documents and mapped test cases based on requirements.
- Collaborated with cross-functional teams to manage defects, validate results, and communicate issues and risks.
- Wrote and executed SQL scripts to validate and analyze data, ensuring data integrity across systems.
- Assisted in functional and system testing of web applications, identifying critical defects early in the development process.
- Utilized test management tools like TestLink for organizing and tracking test cases and results.
- Participated in peer reviews of test cases and provided feedback to ensure comprehensive test coverage.
- Gained exposure to bug management tools like Jira and participated in agile team meetings.

Technical Skills

- **Functional Testing:** Proficient in manual testing, including functional, regression, and integration testing.
- **SQL:** Strong database skills with the ability to write and execute complex SQL queries for data validation.
- **Test Management Tools:** Experience with tools like TestLink and Quality Center for organizing and tracking test cases.
- **Defect Management:** Familiarity with bug tracking tools like Jira for managing and reporting defects.
- **Automation Testing (Basic):** Exposure to functional automation tools like Selenium.
- **Agile Methodology:** Knowledge of agile practices and participation in agile workflows.

Interhips

Machine learning Intern at YBI Foundation
2024

July 2024-August

- ✓ During the course of my internship as a data science intern where I put effort on learning various disciplines such as data analysis, machine learning and get hand-on experience with visualization

JP Morgan-Software Engineering Job Stimulation
2023

June 2023- July

- ✓ Developed and optimized software solutions using [specific technologies, e.g., Java, Python, SQL, etc.], demonstrating proficiency in coding, debugging, and Obstacle navigation.

Certifications

- o Power BI Certification – Udemy
- o Technical Support Fundamentals – Coursera
- o Jira Certification – Udemy

Tools & Technologies

- Java, JavaScript, C Programming
- Networking Protocols (TCP/IP, HTTP)
- Microsoft Office Suite (Word, Excel, PowerPoint)
- Jira & SharePoint
- Debugging & Testing Tools

Soft Skills:

- High performance and drive to succeed.
- Curiosity and a desire to learn and innovate.
- Ambition and a strong desire for career growth.

Projects

- o **Project Name:** Involved in testing REST APIs using Postman, ensuring robust API functionality and data flow between systems.
