Career Objective

I am a passionate Data Science graduate with a solid foundation in programming, machine learning, and data analysis. Completed a virtual internship at **LetsGrowMore**, gaining hands-on experience in building predictive models and working with real-world datasets. Developed impactful projects, including an AI-powered Trip Planner, Movie Recommendation System, Cryptocurrency Tracker, and Disease Prediction Model. Driven by continuous learning and a problem-solving mindset, I am eager to contribute to innovative, data-driven solutions in the tech industry.

Work History

Data Science Virtual Intern
LetsGrowMore

📅 May 2023
Remote

During my internship at **LetsGrowMore**, I played a key role in developing models using various algorithms, contributing to the data science lifecycle. This experience strengthened my expertise in model creation, data analysis, and algorithm implementation.

Technical Skills

- **Programming Language** – Python, JavaScript, HTML, CSS
- **Libraries** – Pandas, NumPy, Matplotlib, React JS
- **Database** – SQL
- **Tools** – Tableau, Workbench, PyCharm, VS Code
- **Additional Skills** – Machine Learning, OOPS, DBMS

Achievements

- TCS-NQT - 70.40% (OCT 2024)
- 5 Star in Python at **HackerRank**
- Solved 500+ problems on **CodeChef**

Coding Profiles

- [HACKERRANK](#)
- [GFG](#)
- [CODECHEF](#)

Academic Details

- **B.Tech Data Science - 7.64 (2021-2025)**
R. C. Patel Institute of Technology, Shirpur
- **HSC- 76.33 (2021)**
Z. B. Patil Junior College, Dhule

Project Details

• **AI Trip Planner**

[Python | Pandas | NumPy | Scikit-learn | Geopy | OpenWeatherMap API | Plotly | Matplotlib | Google Places API | HTML | CSS | JavaScript | ReactJS]

Built an AI-driven trip planner that recommends destinations and creates day-wise itineraries based on user preferences, budget, and distance between locations. Integrated geolocation, smart filtering, and interactive maps for an enhanced travel experience.

• **Crypto-Tracker**

[Python | Pandas | NumPy | Matplotlib | Seaborn | Time-series Analysis | HTML | CSS | JavaScript | React JS | CoinGecko API]

Fetches real-time crypto data using CoinGecko API and displays interactive charts with ChartJS. Users can filter coins and view stats. Context API manages state across components, while Python handles time-series analysis for historical insights.

• **Multiple Disease Predication**

[Python, Pandas, Matplotlib, Machine Learning]
Designed a predictive system using the logistic regression algorithm to identify multiple diseases based on patient symptoms. Developed a machine learning model to analyze symptom data and provide accurate disease predictions, enhancing diagnostic support.

Certification

- Machine Learning Engineer - [Symbiosis Skill & Professional University](#)
- Python for Data Science - [Coursera](#)
- Tableau Training - [Simplilearn](#)
- Aws Cloud Foundation

Soft Skills

- Leadership
- Communication
- Problem-solving
- Decision Making
- Quick Learner
