PROFILE

Data Analyst and Software Developer with expertise in industrial automation solutions, data visualization, and full-stack application development. Demonstrated success in implementing AI/ML solutions that improved operational efficiency by 30%. Experience in developing web-based dashboards, real-time monitoring systems, and data-driven business intelligence solutions. Seeking a Data Analyst/Software Developer role where I can leverage my technical expertise to drive data-informed decision-making.

SKILLS

- **Programming Languages:** Python, SQL, JavaScript, MATLAB
- **Data Analysis & Visualization:** Power BI, Statistical Analysis, Data Modeling, ETL, Real-time Dashboards
- **Software Development:** Full-stack Web Applications, RESTful APIs, Database Design, System Integration
- **Industry Technologies:** IoT Data Systems, Machine Learning, Predictive Analytics, Process Optimization
- **Database Management:** SQL Database Design, Query Optimization, Data Warehousing, ETL Pipelines
- **Tools & Methodologies:** Git, Agile Development, 8D Problem Solving, Root Cause Analysis

PROFESSIONAL EXPERIENCE

Graduate Apprentice

Bosch Limited

2024 Sep – present
Nashik, India

- Developed and deployed data analytics solutions for real-time performance monitoring, improving operational efficiency from 60% to 90%
- Built interactive Power BI dashboards that provided actionable insights, reducing decision-making time by 75%
- Designed and implemented full-stack web applications for automated visual inspection with custom algorithms that reduced defect rates by 15%
- Created ETL pipelines to automate data collection from manufacturing equipment, increasing data accuracy and reducing manual effort

Project trainee

Bosch Limited

2024 Feb – 2024 Aug
Nashik, India

- Performed statistical analysis on equipment breakdown data to identify patterns and implemented preventive solutions, reducing failures by 10%
- Developed SQL queries and data models for Technical Loss Management Cycle data across 5 production lines
- Applied data-driven problem-solving methodologies (8D, Root Cause Analysis) to identify and resolve recurring production issues
- Collaborated with cross-functional teams to develop software tools for continuous improvement projects

Robotics Intern

Celestial Institute Of Technology

2023 Jun – 2023 Aug
Pune, India

- Designed data collection protocols and database schemas for automated warehouse management systems
- Developed software interfaces between sensor data streams and central database systems
- Created data models for inventory optimization and predictive restocking algorithms
- Developed technical documentation and data flow diagrams for integrated automation systems

EDUCATION

Btech,Robotics and Automation Engineering

Bharati Vidyapeeth College of Engineering
CGPA-8.86(till sem 8)

2020 Nov – 2024 May
Pune, India

Higher Secondary

Lions English School
78.6%

2019 Mar – 2020 Mar
Silvassa, India

Secondary

Lions English School
88.6%

2017 Mar – 2018 Mar
Silvassa, India

PROJECTS

Real-Time Machine Monitoring Web Application

- Architected and developed a full-stack web application for production analytics using Python backend and JavaScript frontend
- Implemented RESTful API endpoints to stream real-time data from manufacturing systems to interactive dashboards
- Designed relational database schema to efficiently store and query production metrics
- Developed custom visualization components to track KPIs against targets, enabling data-driven workflow optimization

Associate Performance Tracking Dashboard

- Designed data models and ETL processes to consolidate operator performance data from multiple sources
- Built advanced Power BI visualizations with drill-down capabilities, increasing productivity by 12%
- Implemented automated data refresh mechanisms and API connections to ensure real-time insights
- Created statistical models to normalize performance metrics across different production scenarios

Packaging Area Verification System

- Developed full-stack web application for quality assurance that validates part numbers and specifications against database records
- Implemented automated label printing system that ensures accurate product identification for each batch
- Created database architecture to store and track batch-level quality data with secure server integration
- Built user-friendly interface for quality auditors that reduced verification time and increased accuracy

ALD furnace website

- Developed full-stack web application for thermal process data collection and analysis
- Designed database schema optimized for time-series temperature data storage and retrieval
- Created interactive data visualization components to display real-time and historical temperature profiles
- Implemented automated data validation rules, reducing data entry errors by 95%

COURSES

SAP in material management

Udemy

2024 Apr – 2024 Jun

Artificial Neural Networking

coursera

2022 Aug – 2022 Sep

INTERESTS

Industrial Research, Advanced Robotics, Travel Photography
