SUMMARY

Motivated Computer Science graduate re-entering the tech industry with strong skills in SQL, Python, Excel and Tableau. Experienced in cleaning, analyzing and visualizing large datasets to deliver actionable business insights. Currently building expertise through self-driven projects and applied research. Eager to bring analytical thinking, problem-solving and attention to detail to a Business Analyst Intern role and help deliver clear, actionable solutions.

EDUCATION

Bachelor of Engineering (Computer Science) R.M.D Engineering College, Chennai | CGPA: 7.59 / 10
10+2, Board of Intermediate Education, Andhra Pradesh — 81.2%
10, Board of Secondary Education, Andhra Pradesh — 91.6%

PERSONAL PROJECTS

DMart Lead Time & Inventory Cost Analysis

- Analyzed 100,000+ rows of sample DMart sales data to model how lead time variations affect total inventory holding cost and working capital needs.
- Simulated different scenarios using Python (Pandas, NumPy) with an assumed daily holding cost per unit to calculate average total cost for each lead time.
- Found that extending lead time from 1 to 7 days can increase average total holding cost by over 600%, highlighting the savings potential of faster supply chains.
- Tracked relevant KPIs: lead time, inventory levels, holding costs, and visualized trends in Tableau Public, with a Power BI version in progress.

India Crime Data Analysis (2020–2024)

- Analyzed large simulated Indian crime data to identify trends, geographic hotspots, and victim demographics.
- Managed data extraction and complex queries using SQL (DB Browser for SQLite).
- Cleaned and summarized data in Excel, with clear charts for insights.
- Designed an interactive Tableau dashboard, currently building a Power Bi version to expand skills.
- Revealed actionable patterns for policy and business decision-making.

[GitHub Project](#) | [Tableau Dashboard](#)

Python CSV-to-SQL Importer

- Automated importing CSV files into SQL databases with smart type inference and bulk loading.
- Used Python, Pandas, and MySQL Connector for efficient data processing and database integration.

TECHNICAL SKILLS

- **Languages:** SQL , Python (pandas, numpy)
- **Data Analytics:** Cleaning, EDA, reporting
- **Visualization:** Tableau (intermediate), Power BI (in progress)
- **Tools:** MS Excel, Google Sheets, Git, GitHub, Jupyter Notebook, VS Code
- **Database:** SQL querying, ETL, relational DB design
- **Other:** Strong problem-solving, clear communication, collaborative mindset, quick learner

Certification

- Business analysis foundations – linkedin Learning(2025)
- Python for Data Science — IBM(July 2025)
- SQL and Relational Databases — IBM(July 2025)
