Projects

E-commerce Website Insights

31 Days

Developed an insights dashboard for an eCommerce website to optimize sales performance using MySQL and Python. Collected and processed data through techniques like data mining, cleaning, and statistical analysis. Focused on key metrics such as conversion rates and average order value, identifying insights like a correlation between page load times and bounce rates, resulting in a 15% improvement in site performance. Visualized and reported findings using PowerBI.

HR Data Insights

30 Days

Conducted exploratory data analysis (EDA) on HR datasets to identify patterns and outliers, analyzing metrics like employee turnover, retention, and performance. Applied predictive analytics to forecast HR trends and employee attrition. Developed interactive dashboards in Power BI and Excel to visualize key HR metrics and KPIs.
