Education

SRM University, AP

Bachelor of Technology in Computer Science and Engineering

2021 - 2025

Amaravati, Andhra Pradesh, India

Experience

State Street Corporation

Technology Intern

January 2025 - Present

Hyderabad, Telangana, India

- Conducted **manual data validation and QA testing** by exporting source and target datasets from a proprietary platform and comparing them using **Excel formulas** to ensure data accuracy and integrity.
- Collaborated with cross-functional teams to **analyze test cases, identify data mismatches, and document discrepancies**, contributing to enhanced platform reliability and compliance with client requirements.
- Played a key role in **end-to-end manual testing workflows**, verifying business logic and transformation rules, which improved data quality and reduced post-deployment defects by ensuring robust validation procedures.

CodeSwap Solutions PVT LTD

Full-Stack Developer Intern

June 2023 – August 2023

Remote

- Designed and developed a **full-fledged official company website** using **Django** for the backend and **HTML, CSS, JavaScript** for the frontend, delivering a responsive and user-centric interface.
- Implemented **API integrations and backend logic** to enable seamless data flow and secure user interactions, aligning with performance and scalability requirements.
- Collaborated in an **Agile development environment**, utilizing **Git** for version control and contributing to streamlined, collaborative coding workflows.

Projects

Tuberculosis Detection | Python, Jupyter Notebook

[GitHub](#)

- Developed and deployed an AI-based Tuberculosis detection system using **Convolutional Neural Networks (CNNs)** trained on chest X-ray datasets, achieving **96% test accuracy** with strong precision and recall.
- Implemented robust **image preprocessing, data augmentation, Grad-CAM visualizations**, and a **Flask-based web interface** for real-time prediction and model interpretability in resource-constrained healthcare settings.

Mobile Number based Data Encryption in Edge-Cloud Computing (MDEECC) | Java, Python

[GitHub](#)

- Developed an **AES-256 encryption** based secure data transmission system for edge-cloud computing environments, strengthening cybersecurity across mobile and cloud applications.
- Conducted **performance simulations and validation tests**, demonstrating the encryption system's effectiveness in protecting sensitive data in real-world distributed computing scenarios.

Disaster Management and Response System | Java, Spring Boot

- Developed a Disaster Management and Response System using Java to enhance **emergency response efficiency** during natural disasters (e.g., earthquakes, floods).
- Created a **real-time alert system** that utilizes APIs to provide critical information about disaster risks and resource availability, improving response times and coordination among rescue teams.
- Implemented a mapping feature to **visualize affected areas and track resources**, enhancing situational awareness and decision-making during crises.

Technical Skills

Programming Languages: C, C++, Java, Python, JavaScript, HTML, CSS

Web Development: React.js, Angular, Node.js, Express.js, Flask, Django

Frameworks & Libraries: Spring Boot, Bootstrap

Databases: MySQL, MongoDB, NoSQL

Cyber Security: AES-256 Encryption, SQL Injection Testing, Data Protection, Cloud Security

Tools & Platforms: Git, VS Code, Linux, Microsoft Excel, Microsoft PowerPoint, Microsoft Word

Development Methodologies: Agile, Scrum

Relevant Coursework: Data Structures and Algorithms, DBMS, OOPs, Operating System, Computer Networks
