OBJECTIVE

Succeed in an environment of growth and excellence and earn a job, which provides me a job satisfaction, and self-development and help me achieve personal as well as organizational goals.

SKILLS

- **Programming Languages:** Python, SQL
- **Data Visualization:** Power BI, Seaborn, Matplotlib
- **Data Analysis & Libraries:** NumPy, Pandas, Advanced Excel

PROJECTS

Bank Data Analysis Dashboard – (Power BI) [Project Link](#)

Tools Used: Power BI, DAX, Power Query

- I created a dynamic dashboard using Power BI to analyze and visualize bank-related data. The dashboard highlights important metrics such as customer profiles, account balances, loan details, and transaction activities. By applying filters, charts, and key performance indicators (KPIs), the project makes complex data easier to understand for both analysis and decision-making. Data was prepared and transformed using Power Query, and DAX formulas were used to build custom calculations. The final output allows users to explore trends, segment customers, and gain meaningful insights from the bank's data in an interactive way.

BlinkIT Data Analysis Project – (Excel) [Project Link](#)

Tools Used: Microsoft Excel (Pivot Tables, Charts, Formulas)

- Analyzed sales data of BlinkIT to understand which products and store types performed best. Used Excel to clean the data, create pivot tables, and calculate key metrics like total sales, average rating, and item visibility. Created charts and dashboards to show trends in product types, fat content, and outlet size. Found useful insights to help improve sales and customer satisfaction. Used Power BI to present data in a clear and easy-to-understand way.

Contact Book Project – (Python) [Project Link](#)

Tools Used: Python, MySQL, mysql-connector (Contact Book using Python and MySQL)

- I created a Contact Book application using Python and MySQL. It allows users to add, view, search, and delete contacts. The contact details are saved in a MySQL database, so the data stays even after the program is closed. I used Python's mysql-connector to connect the program with the database.

Tools Used: Python (basic), Command Line (Contact Book using Python (Lists and Dictionaries))

- This is a simple Contact Book made using Python lists and dictionaries. It lets users manage contacts in one session. You can add new contacts, view all, search by name, or delete a contact. This version does not use any database, so the contacts are not saved after closing the program.

EXPERIENCE

- **Organization Name:** Zappcode Solution (Nagpur, Maharashtra)
- **Domain:** Data Science
- **Duration:** Jan 2025 to Present

EDUCATION

June 2025

MBA, Business Analytics & Human Resource Management

DR. AMBEDKAR INSTITUTE OF MANAGEMENT STUDIES AND RESEARCH NAGPUR

7.21 CGPA

June 2022

Bachelor of Arts

Y C COLLEGE MANGRULPIR

77.50 %

CERTIFICATIONS & OTHER-ACADEMICS

- Principles of Management || Human Behaviour (NPTEL Online Certification)
- SAP Human Capital Management (2 day's Skill Development Workshop Participation Certification)
- NSS Volunteer
