

PRACHI MANTRI

MANTRI6@GMAIL.COM

PH: 9420780824

Profile Summary

- Senior Quality Engineer on E-Commerce platform.
- Extensive experience of **4 + years as Quality Engineer** – Automation Testing using Selenium with Java, Manual Testing, Sanity Testing, Smoke Testing, Swagger and UI, Argo Workflow Testing. End-to-End testing, AWS S3 and UBX Buckets, Couchbase Database.
- Experience writing code using Selenium Web driver and Java.
- Experience in writing testcases for various new features to be tested and providing a product fit to be released for production.
- Extensive total experience in Manual testing as well as Automation Testing and taking on the responsibility of writing testcases, running them, find bugs, reporting them using Jira and retesting the products.
- Extensive experience in end-to-end testing of the Argo Workflow necessary for the proper data sent by customer to be displayed on the E-Commerce platform.
- Basic Knowledge of Selenium using Java.
- Certification in SDET.

Work Experience

Persistent Systems Limited -Pune, India – December 2019 to August 2024

Senior Quality Engineer

- Testing the website by using Selenium and java code to generate data and check the features are working properly.
- Testing the complete working and data being saved to database manually for E-Commerce platform.
- Testing of single module after new feature is added.
- End-to-end Testing of Argo workflow for E-Commerce platform.
- Reporting of bugs found through Jira and slack.
- Documenting testing process on confluence.
- Creating pipelines using Jenkins with various jobs so that running the first job manually would complete testing for all the aligned jobs/features.
- Created a UI for login using persistent github credentials which displayed the data like number of open PRs, closed PRs in tabular as well as pie chart form using python.

Project Details

RTP_WATSON

Client: Leading company in E-Commerce

Role: Senior Quality Engineer

The project was based on displaying the data sent by client in the catalogs on the E-Commerce platform in the various zones like Most Popular, Recently viewed, etc. On getting the client catalog, the Argo workflow was run so as to save the new data to be displayed on the platform and also in the AWS S3 bucket and couchbase database.

Responsibilities:

- Writing code using Automation with Selenium and Java for creating test data to test the working of website.
- Testing the complete working and data being saved to database manually for E-Commerce platform.
- Testing of single module after new feature is added.
- End-to-end Testing of Argo workflow for E-Commerce platform.
- Reporting of bugs found through Jira and slack.
- Monitoring CloudWatch logs and creating alarms and alerts for change in state for KDAs.

Sailfish

Client: An IBM project

Role : Quality Engineer

Running the pipelines on Jenkins for every new build provided by the customer and checking the failed jobs for issues.

Responsibilities:

- Running the Jenkins pipelines for various tasks.
- Analysis of failed jobs in the pipelines
- Resolving issues and re-running the jobs.

Project Trainee

Role: Project Trainee

Responsibilities:

- Creating UI for displaying data from Git on user screen without using Git
- Learned Python.
- Created login page to login to persistent github to read data.
- Created a project that listed the number of closed PRs, open PRs, Issues in a tabular format as well as a pie chart for a logged in user.
