EDUCATION

Bachelor of Technology | IIT Roorkee | 2018

UPSC Civil Services Exam | 2019-2023

PG Certificate in Management | Global Governance Initiative | 2024

PROJECTS

Cab Bookings Data Analysis ([Link](#))

- Analyze demand trends and trip distances to improve driver allocation, aiming to reduce idle time by **15%** (equivalent to **120,000** fewer idle driver hours per month).
- Enhance Booking Efficiency – Monitor booking outcomes and cancellation reasons to boost ride completion rates.
- Match vehicle types with trip needs to increase fleet utilization by **18%** and improving on-time arrival rates by **12%**, equivalent to an additional 840,000 punctual trips annually.
- Track service quality and customer ratings across vehicle categories to raise average customer satisfaction scores by **0.5** points (on a 5-point scale) and reduce complaints.
- Maximize Revenue – Understand payment behaviors and identify top customers to drive financial performance and loyalty.

Quick Delivery Orders Data Analysis ([Link](#))

- Measure total and average sales to evaluate overall revenue generation—aim to increase total monthly sales by **15% (e.g., from \$8M to \$9.2M)** and boost average transaction value, resulting in an annual revenue lift of over **14 million**.
- Customer Satisfaction – Track average customer ratings to gauge product and service quality.
- Analyze number of items sold and performance by item type to optimize inventory—identify and scale high-performing SKUs contributing to **65% of sales**, phase out underperformers responsible for **less than 5% of revenue**, and reduce stockouts by **30%**.
- Assess how fat content in products influences sales and customer metrics—leverage insights to increase low-fat product sales by **25%** while maintaining satisfaction scores across all fat categories.
- Outlet-Based Comparison – Evaluate how outlet type, age, and fat content distribution affect sales performance.

TECHNICAL SKILLS

Tools and Languages

- MS Excel (Advance), AWS (S3, Lambda), D-Beaver, SQL, Python, DAP (ETL Tool)
- Google Analytics, Data Studio, Power BI, Airflow, Gitlab, Google Bigquery, Metabase
- Anaconda Navigator, Datagrip, Redshift, Snowflake, Tableau.

Skills

- Root Cause Analysis, Exploratory Data Analysis, Machine Learning, Risk Analytics
- Funnel Analysis, Portfolio Risk Performance.
