Summary

Analytical and technically driven Data Science Professional with hands-on experience as an LLM Evaluator, AI Trainer, and Data Analyst. Skilled in prompt engineering, NLP data annotation, and GenAI evaluation. Proficient in Python, SQL, and Power BI, with a strong foundation in statistical analysis, EDA, and machine learning. Proven ability to turn raw data into actionable insights, fine-tune AI systems, and contribute to LLM alignment and performance improvement.

Education

NMIT Bangalore, BE in Information Science and Engineering	2024
Little World School(CBSE), XII	2020

Experience

AI Trainer – LLM Evaluation, Alignerr – Freelance, Remote March 2025 – Present

- Evaluated and rated 300+ prompts and chat responses to fine-tune large language models (LLMs).
- Annotated and labelled 500+ text samples for NLP tasks such as intent classification and response generation.
- Improved AI output quality by identifying and correcting logic gaps, enhancing accuracy and coherence.

Intern, Lumen – Bangalore Jan 2024 – Jul 2024

- Developed a Python-based automation tool to generate monthly shift schedules for a 100-member support team, handling 50K+ chats/month, improving adherence by 4–5 percentage.
- Analyzed chat inflow forecasts to determine optimal staffing needs and shift coverage, enhancing scheduling accuracy and workforce efficiency.
- Integrated leave management and shift planning, saving 3–4 hours of manual effort monthly and streamlining operations using pandas, openpyxl, and Power BI.

Certifications

- **ChatGPT Prompt Engineering for Developers** – OpenAI & DeepLearning.AI
- **Pattern Discovery in Data Mining** – Coursera, University of Illinois
- **The Joy of Computing Using Python** – NPTEL, IIT Madras

Projects

Deep Learning Based Fingerprint Spoof Detection

- Developed feature fusion using SIFT, LBP, and HOG descriptors to train the fingerprint classification model.
- Trained and optimized SVM to classify genuine vs. fake fingerprints, achieving 88% accuracy.
- Implemented an authentication system with security question verification to enhance user security.

Calorie Tracker with Alerts and Visual Analytics

- Developed a Python tool to monitor daily calorie and nutrient intake with automated alerts for goal adherence.
- Created interactive data visualizations using Matplotlib to track nutrition progress.
- Implemented scheduled notifications using Python libraries to enhance user engagement.

Tools and Technologies

Languages: Python, SQL (MySQL)

Libraries/Frameworks: Pandas, NumPy, Matplotlib, Seaborn, Openpyxl

Tools: MS Excel, Power BI, Jupyter Notebook
