TECHNICAL SKILLS

Languages: SQL, Python, Java

Databases: MySQL, MSSQL, PostgreSQL

Tools: MS Excel, Power BI, Git

WORK EXPERIENCE

Mphasis Limited

Dec 2024 – Jan 2025

Associate Software Engineer

- Acquired foundational to core-level knowledge of Java, including OOPs concepts, exception handling, multithreading, and file handling.
- Gained exposure to Software Development Life Cycle (SDLC) methodologies, including Agile, to understand project workflows and development best practices.
- Developed and tested applications using SQL for database interactions, and integrated frameworks such as Hibernate to streamline data handling.
- Obtained hands-on experience with database management with SQL and the software development lifecycle to deliver end-to-end solutions.

HighRadius Technologies

Feb 2022 – Oct 2022

Internship

- Gained a comprehensive understanding of marketing concepts, including an introduction to marketing and the significance of the 4Ps (Product, Price, Place, and Promotion).
- Studied the importance of Segmentation, Targeting, and Positioning (STP) in marketing strategies.
- Explored various marketing roles and their functions.
- Prepared multiple PowerPoint presentations on general marketing case studies.

PROJECTS

Bank Management Service

- Designed and implemented a relational database schema for a Bank Management System using SQL.
- Create and normalized tables for key entities: **Bank, Branch, Customer, Account, and Loan.**
- Enforced data integrity using **Primary Keys, Foreign Keys, Unique Constraints**, and cascading actions (**ON DELETE CASCADE, ON UPDATE CASCADE**).
- Populated the database with dummy data for testing and validation.
- Wrote and executed SQL queries to retrieve and manage data effectively.

Music Store Analysis Using SQL

- Conducted comprehensive data analysis on a digital music store database to extract actionable insights for business improvement.
- Utilized complex joins to connect related tables and uncover trends across customer purchases and track popularity.
- Implemented aggregations (SUM, COUNT, AVG) to analyze total revenue, customer lifetime value, and sales performance.
- Segmented customers based on their purchasing behavior, helping the business target high-value customers.
- Provided actionable recommendations on customer behavior and product performance, improving the store's decision-making and business strategy.

Facial Emotion Recognition Using Machine Learning in Python

- Developed and trained a CNN model for facial emotion recognition using Python.
- Utilized convolutional and pooling layers for feature extraction from facial images.
- Achieved 60.72% accuracy and 61.26% validation accuracy through robust testing procedures.
- Processed and analyzed facial image data to classify emotions with high precision.
- Evaluated model performance using accuracy metrics and validation data, achieving reliable emotion classification results.

EDUCATION

ITER, Siksha 'O' Anusandhan University

Bachelor of Technology (Electronics & Communication)

Aug 2019 – July 2023

Bhubaneswar, Odisha
