Professional Summary

Results-oriented Business Analyst Intern with hands-on experience in financial modeling, data analysis, and performance dashboards using Python, Power BI, and Excel. Proven ability to translate business needs into actionable insights, streamline operations, and support data-driven decision-making. Experienced in SaaS platforms, stakeholder collaboration, and process improvement in agile settings.

Skills

Programming: Python, SQL, Java, C, Apex, R

Data Tools: Power BI, Excel, OpenCV, Grad-CAM, Arduino, MSOffice, GSM

Web/Frameworks: HTML, CSS, JavaScript, Django, PHP

Methodologies: Business Analysis, Financial Modeling, Agile, Requirements Gathering

Databases: MySQL, MongoDB

Experience

Business Analyst Intern

Avijo (Healthtech Startup)

April 2025 – Present — Remote

- Developed financial models for SaaS pricing and revenue strategy, projecting a 12% increase in ARR.
- Streamlined operational workflows with SOPs, improving team efficiency and reducing delays by 30%.
- Conducted market research to support GTM planning and strategic positioning of new features.

Business Analyst Intern

YBI Foundation

May 2024 – July 2024 — Remote

- Applied Python and ML models to identify patterns and trends in business case data.
- Designed interactive Power BI dashboards, enhancing KPI visibility for decision-makers.
- Partnered with product and strategy teams to deliver three key process improvements based on insights.

Education

B.Tech in Computer Science, Specialization: AI & Machine Learning

Siddhartha Academy of Higher Education

Oct 2022 – Apr 2026

CGPA: 8.7 / 10.0

Relevant Coursework: Data Analysis, Machine Learning, Business Intelligence, AI Systems

Projects

Illegal Tree Logging Detection System (AI + IoT)

Tools: OpenCV, CNN, Arduino-GSM

Github

- Built a real-time monitoring system to detect illegal logging with 85% accuracy using computer vision.
- Reduced response time by 60% via automated SMS alerts to forest officials.

Chest X-ray Image Analysis for Multi-Disease Detection

Tools: Python, CNN, Grad-CAM, NLP, HTML/CSS

Github

- Created a diagnostic tool for disease detection (e.g., pneumonia) with over 80% accuracy.
- Automated radiology report generation using NLP, reducing manual input time by 70%.

Certifications

- **Business Analysis Fundamentals** : Microsoft / LinkedIn Learning
- **Data Science in Python** : edX
- **Google Analytics for Beginners** : Google Academy
- **Python and Problem Solving** : HackerRank
- **Cybersecurity, Ethical Hacking, Linux Essentials** : Cisco Networking Academy
