EDUCATION

Jabalpur Engineering College

B.Tech in Information Technology

Jabalpur, India

2022 – 2026

Indian Institute of Technology

B.S. Degree in Data Science and Applications

Madras, India

2023 – 2027

SKILLS

Programming Languages: Python, C++, SQL, Java

Tools: Visual Studio, Github, Google Colab, SQL Server Management Studio

Technical Skills: Python Developer, Data Structures and Algorithm, Data Analyst

Soft Skills: Teamwork, Management, Communication, Leadership

WORK EXPERIENCE

Mactores

June 2025 – Present

Data Engineer Intern

- Built and optimized scalable data pipelines using AWS Glue, Lambda, S3, and Databricks for large-scale processing.
- Automated ETL workflows using Apache Airflow and monitored jobs via CloudWatch and Databricks Jobs.
- Collaborated with teams to develop data models and dashboards using Databricks, Redshift, and SQL.
- Implemented data security and compliance using IAM, KMS encryption, VPCs, and Unity Catalog in Databricks.

BHEL

June 2023 – July 2023

Software Engineering Trainee

- Developed and optimized internal web applications using MERN stack, improving efficiency in data management and reporting..
- Automated data processing tasks using Python scripts, reducing manual effort and enhancing accuracy.
- Assisted in database management and API development, ensuring seamless integration with existing enterprise systems.
- Conducted code reviews and performance optimizations, enhancing the scalability and security of existing applications..

PROJECTS

Blinkit Data Visualization Project

February 2025

- Developed an interactive Power BI dashboard for Blinkit's grocery sales and operations by integrating multi-sheet Excel datasets covering sales, customer ratings, product categories, and outlet details.
- Automated the ETL pipeline using Python and SQL Server to ingest, clean, and aggregate large datasets, leveraging pandas for data transformation and SQL queries for multi-year revenue consolidation.
- Delivered insights on sales performance, customer preferences, and outlet efficiency using Power BI visualizations, slicers, and KPIs, enabling data-driven recommendations for product focus and outlet strategy.

AI-Based String and Numerical Transformation System

December 2024

- Implemented Python-based logic for string case transformations and numerical calculations, ensuring efficient processing of large datasets.
- Used PySpark within Databricks to process and transform large-scale text and numerical data efficiently, optimizing parallel computing performance.
- Designed algorithms to handle varied input scenarios, ensuring error-free execution and optimized memory utilization for high-performance data processing.

Stock Market Data Analytics

August 2024

- Built pipelines to ingest stock data from Alpha Vantage API into Azure Blob Storage.
- Performed data transformations in Databricks to calculate KPIs for financial analysis.
- Automated the pipeline with Azure Data Factory for scheduled processing.

COURSEWORK

- Database Management System
- Computer Networks
- Operating Systems
- Object-Oriented Programming
- Cloud Computing
- Software Engineering

CERTIFICATIONS

SQL (Basic) - Certificate

Software Engineer - Certificate

Python (Basic) - Certificate
