

AKHILESH SINGH

Data Analyst

About Me

Detail-oriented and analytical Data Analyst with experience in data collection, analysis, and interpretation. Proficient in using advanced analytical techniques and tools to drive business insights and decision-making. Seeking to leverage my expertise in data analysis, statistical modeling, and data visualization experience to contribute effectively

Skills

- Data Visualization
- Data modeling
- Query optimization
- ETL processes
- Database design
- Performance tuning
- Regression Analysis
- Hypothesis Testing,
- A/B Testing
- Data Quality Assurance

Education

Master of Science (CS)
Jiwaji University

2022 - 2024

- Optimized complex **SQL queries** during PG coursework, reducing execution times by 50% through indexing and query rewriting.
- Managed **ETL processes** using **SSIS** in PG projects, automating data tasks and cutting manual processing by 25%.
- Developed and maintained dashboards and reports using **Tableau**, **Power BI**, and **Excel** to visualize key performance indicators (KPIs).
- **Utilized Power BI** in PG research projects to build dashboards that visualized key trends and KPIs.
- Conducted statistical analysis, including regression models, **hypothesis testing**, and **A/B testing** to support business strategies.
- Familiar with ETL tools like Talend and **Apache Nifi**.

Bachelor of Science (CS)
Jiwaji University

2016 - 2019

- Developed advanced **Excel skills**, including pivot tables, **VLOOKUPS**, and complex formulas, applied in UG projects for data analysis.
- Gained hands-on experience with SQL for querying and managing relational databases, working with **MySQL**, **PostgreSQL**, and **Oracle** in UG projects.
- Utilized Python for data analysis, employing Pandas and NumPy for data manipulation, and **Scikit-learn for basic machine learning** models.

XII- PCM
Kendriya Vidyalaya

2015 - 2016

- Learned MySQL fundamentals through coursework, including writing basic queries for data retrieval and manipulation.
- Developed problem-solving skills through logic-based programming and projects.
- Studied Excel basics like pivot tables, VLOOKUPS, and formulas in 12th grade, applying them in UG projects for data analysis and insights

Tools

- Power BI
- Excel
- Visual Studio
- JIRA
- SSRS
- SSIS
- Git
- Python & R
- Alteryx
- Apache Nifi
- Matplotlib & Seaborn

Databases

- PostgreSQL
- SQL Server
- MYSQL
- Oracle

Projects

Real-Time Sales Data Analysis System

- Developed a comprehensive sales data analysis system using SQL Server, allowing the sales team to generate real-time reports and insights.

Customer Feedback Insights Database

- Designed and implemented a database system to store and analyze customer feedback, providing actionable insights for the marketing team

Application Support and Query Optimization

- Developed complex SQL queries, stored procedures, and triggers to support various applications and reporting needs.

ETL Process Management with SSIS

- Developed and maintained **ETL processes** using **SQL Server Integration Services (SSIS)**

Predictive Modeling with Machine Learning

- Applied basic machine learning techniques using Scikit-learn in PG projects. Developed models such as linear regression, decision trees, and clustering to predict outcomes and classify data.

Cloud-Based Data Analysis Solutions

- Explored cloud computing platforms such as **AWS, Google Cloud, and Azure** in PG coursework. Applied these platforms to host databases and perform large-scale data analysis tasks

Certificates

- Crash Course on Python by Google
- Python Pro Bootcamp 2023, Udemy
- Complete SQL Bootcamp 2024, Udemy
- Udemy Django Framework, Linkedin
- Data Science Bootcamp 2024, Udemy

Internship

Data Analyst Intern

Unified Mentor

Jan 2025 – Feb 2025

- Analyzed large datasets using **SQL**, improving reporting **efficiency by 25%**.
- Created interactive dashboards in **Power BI/Tableau** for business insights.
- Assisted in data cleaning, **transformation**, and **visualization** to support decision-making.
- Developed **Python scripts** for automating data extraction and analysis.
- Collaborated with cross-functional teams to identify trends and **key performance indicators (KPIs)**.
