Objective

Computer Science student who is extremely driven and dedicated toward problem solving and technology. Eager to put the theoretical knowledge acquired in class to real-world problems. Skilled in software development processes and willing to provide unique ideas in a team setting. Excellent communication skills and a quick learner, keen to adapt to new technologies and effectively contribute to projects.

Education

Chandigarh University, BE in Computer Science with Artificial Intelligence and Machine Learning 2021 – 2025

- CGPA: 7.85/10.00

Navy Children School, Kochi, 12TH 2020 – 2021

- Percentage: 95.6

Navy Children School, Kochi, 10TH 2018 – 2019

- Percentage: 95

Technical Skills

Programming Languages: Python, C++, SQL, R, Git, Snowflake, JIRA

Data Visualization: Power BI, Excel, Tableau, Matplotlib, Seaborn

Machine Learning: Regression, Classification, Model Evaluation

Web Technologies: HTML, CSS

Interpersonal Skills: Team Leadership, Adaptability, Communication, Problem Solving, Quick Learner

Projects

Network Anomaly Detection Using Machine Learning Sept 2024

- Developed and deployed a machine learning model for real-time network anomaly detection.
- Used feature engineering and pre-processing to improve model accuracy.
- Tools used: Python, Scikit-learn, Pandas

Heart Disease Risk Detection System Feb 2024

- Developed a predictive model to assess the likelihood of heart disease using patient health data.
- Achieved an accuracy of 87 percentage using Random Forest and applied ROC-AUC and confusion matrix for performance metrics.
- Tools used: Python, Pandas, Scikit-learn, Matplotlib, Seaborn

Music Recommendation System Sept 2023

- Developed an advanced music recommendation system leveraging YouTube API data, audio feature extraction, and hybrid filtering techniques.
- Developed hybrid filtering (content + collaborative) for personalized suggestions.
- Built an interactive analytics dashboard using Streamlit to track engagement, recommendation performance, and listening patterns.

Pixie - A voice based assistant using AI Jan 2023

- Developed a command-line AI voice assistant that interprets spoken commands and automates tasks like web search, weather updates, and launching applications.
- Implemented natural language understanding and voice interaction features, enabling real-time voice responses

and external API integration.

- Tools used: Python, SpeechRecognition, Pyttsx3, Pyaudio, OpenAI API, Weather and Wikipedia APIs

Certification

Advanced Machine Learning on Google Cloud - Google Cloud(Coursera)

Microsoft Power BI Data Analyst - Microsoft(Coursera)

Introduction to Data Science - IBM (Coursera)

Postman API Fundamentals Student Expert (Canvas Credentials (Badgr))

Introduction to JIRA - SimpleLearn

Extra-Curricular Activities

Part of National Cadet Corps(NCC)

Runner-up in Basketball Tournament

Got facilitated by Children's Movement of Civic Awareness(CMCA)

Part of Robin Hood NGO
