EDUCATION

Bachelor of Technology in Electronics and Communication Engineering 2021-2025

GIET University, Gunupur, Odisha

CGPA: 7.11

Higher Secondary (12th Grade Science, CBSE) 2020-2021

Gandhi Public School, Gunupur, Odisha

Percentage: 73.5

Secondary (10th Grade, CBSE) 2018-2019

Gandhi Public School, Gunupur, Odisha

Percentage: 83.6

SKILLS

Technical Skills Python, SQL, C, C++, Power BI, Tableau, Google Colab, Visual Studio, MS Excel, MS Word, MS PowerPoint

Data Skills Data Cleaning, Data Analysis, KPI Reporting, Data Modeling, Dashboarding, Statistical Analysis

Soft Skills Communication, Analytical Thinking, Problem Solving

CERTIFICATIONS

-
- Data Science Training – Internshala
 - Power BI Job Simulation – PwC (via Forage)
 - Career Essentials in Data Analysis – Microsoft and LinkedIn

PROJECTS

Used Car Sales Dashboard | SQL, Power BI & Excel Project | [Link](#)

- Analyzed used car listings using SQL to uncover top-selling car models, yearly price trends, and brand-wise performance from the CarDekho dataset.
- Performed data preprocessing in Excel and Power Query, including brand extraction from car names, and applied SQL functions (MAX, SUM, COUNT) to drive meaningful insights.
- Developed an interactive Power BI dashboard to display car sales distribution by fuel type, transmission type, seller type, and sales over time for business decision-making.
- Highlighted key insights such as total cars listed, most sold car, least performing brands, and year-wise revenue spikes through card visuals, charts, and slicers.

Data Professional Survey Dashboard | Power BI Project | [Link](#)

- Analyzed survey data of 630 global data professionals using Power BI to uncover insights on demographics, salaries, and job satisfaction.
- Cleaned, transformed, and modeled data to build interactive dashboards showcasing key metrics like average salary by role, gender distribution, and happiness scores.
- Translated complex data into actionable visual reports to support strategic planning and decision-making.

Hotel Booking Cancellation Dashboard | Excel Project | [Link](#)

- Analyzed hotel booking data (119,390 records) using Excel to identify cancellation trends by hotel type, guest type, room preference, and month.
- Cleaned and transformed raw data using Excel formulas and pivot tables to generate insights on booking patterns and total cancellations (44,224).
- Designed interactive dashboards visualizing key metrics such as cancellation rates by hotel (City vs Resort), guest categories, and seasonal trends.
