Education

G H Raison College of Engineering & Management, Pune B.Tech. in Information Technology	<i>Dec 2021 – June 2025</i> CGPA: 7.95/10
Yashwantrao Chavan Institute of Science, Satara Higher Secondary and Secondary Education Board	<i>June 2019 – May 2021</i> Percentage: 82%

Skills and Technologies

Programming Languages: C++, Java
Web Development: HTML, CSS, JavaScript, React.js, Tailwind CSS, Bootstrap
Tools: Git, GitHub, Unix/Linux
Databases: SQL, MySQL
Problem-Solving Experience: LeetCode: 400+, GeeksforGeeks: 190+

Work Experience

Web Development Intern — Fourise Software Solutions, Pune	<i>July 2024 – Dec 2024</i>
- Developed and maintained web pages using HTML, CSS, JavaScript, and frameworks like React.js, ensuring a seamless user experience. - Collaborated with senior developers to troubleshoot bugs, optimize website performance, and implement new features based on client requirements; also tested web applications. - Improved website performance by 20% and optimized data retrieval for applications with 1000+ monthly users. Worked with backend technologies like Node.js and databases such as MySQL to enhance website functionality and improve data handling.	

Projects

Sorting Algorithm Visualizer	<i>HTML, CSS, JavaScript, Data Structures</i>
- Built a web app to visualize sorting algorithms by implementing real-time updates, speed control, and dynamic array resizing, resulting in enhanced learning engagement. - Developed an interactive UI with HTML, CSS, and JavaScript to enable seamless algorithm visualization, leading to improved comprehension. - Impacted 200+ students by providing a hands-on learning tool, resulting in better understanding of sorting concepts.	
Sensitive Information Detection System	<i>Python, PyMuPDF, OCR, Scikit-learn, NLTK, PDF2Image</i>
- Built an automated system to detect sensitive information in PDFs using PyMuPDF and OCR, ensuring accurate extraction from both text-based and scanned documents. - Applied advanced text preprocessing with NLTK (including tokenization, stemming, and stopword removal) and implemented TF-IDF with Cosine and Jaccard Similarity to detect patterns, anomalies, and potential data leaks. - Impact on real-time document analysis maximizes security compliance, reduces manual efforts, and enhances data protection.	

Achievements

- Smart India Hackathon 2024: Selected at the college level for developing a platform to help Kashmiri people sell local products across India.
- Achieved 5-star ratings on HackerRank in C, C++, and Python; solved 400+ problems on LeetCode and 190+ on GFG.
- Won 3rd prize in an inter-college hackathon for building an NLP-based sensitive data detection system and contributed significantly to team success.
