EDUCATION

Indian Institute of Information Technology Sricity

Sricity, Andhra Pradesh

Bachelor of Technology in Electronics and Communication Engineering

Dec. 2021 – May 2025

- **Relevant Coursework:** Introduction to Programming (C), Data Structures and Algorithms , Probability & Statistics, Object Oriented Programming (C++), Computer and Communication Networks, Pattern Recognition, Introduction to Data Analytics, Digital Image Processing, Software Defined Networks

TECHNICAL SKILLS

Programming Languages: Python, R, MATLAB, SQL

Frameworks: TensorFlow, PyTorch, Keras, Flask

Developer Tools: Jupyter Notebook, Google Colab, Power BI, Git, VS Code

Libraries: NumPy, Pandas, Matplotlib, Seaborn, Plotly, Scikit-learn,

Technologies: Statistical Analysis, Data Analytics, Business Analytics, Data Visualization, Data Science.

PROJECTS

Stock Data Analysis | *Python, Pandas, BeautifulSoup, Plotly, yfinance*

- Utilized BeautifulSoup, Selenium, and yfinance to extract historical stock prices, revenue, and dividend data for Tesla, GameStop, and Apple from various dynamic and static web sources.
- Designed automated pipelines for extracting, cleaning, and formatting financial data using web scraping and APIs, enabling structured analysis and cross-comparison of multiple publicly listed companies.
- Employed Plotly to build interactive visualizations that highlight trends in stock performance, revenue progression, and dividend changes, supporting insightful and data-driven financial decision-making processes.

HR Analytics and Attrition Insights Using SQL | *SQL*

- Conducted comprehensive HR analytics using SQL on employee data to uncover trends in attrition, job satisfaction, and departmental demographics.
- Designed and executed 10+ insightful queries to analyze employee count, age distribution, role frequency, education-level satisfaction, and attrition rates across different segments.
- Delivered data-driven insights for HR decision-making, including identifying high-risk attrition groups, satisfaction disparities, and departmental engagement patterns.

Superstore Retail Performance Dashboard using Power BI | *Power BI*

- Developed a dynamic Power BI dashboard analyzing Superstore sales, profit, and regional trends, enabling business teams to gain actionable insights and optimize strategic decision-making processes.
- Created custom DAX measures to track KPIs like sales growth, profit margin, and discount effectiveness, significantly improving reporting accuracy and operational visibility across categories.
- Implemented slicers, drill-downs, and interactive filters to allow stakeholders to explore product-level performance, identify high-impact segments, and prioritize data-driven improvements efficiently.

CERTIFICATIONS

IBM Data Science : Python for Data Science and AI, Data Analysis, Data Visualization, Machine Learning, Capstone Data Science Project

MERN Stack : HTML/CSS, Responsive Design, JavaScript, React, NodeJS,

Cloud Computing : AWS , GCP Fundamentals, Infrastructure in GCP, Networking and Security, ML/AI in GCP

SOFT SKILLS

Soft Skills: Insight-driven decision making, Business impact analysis, Analytical problem-solving, Data storytelling, Strategic thinking, Customer behavior analysis, Cross-functional collaboration.
