SUMMARY

A results-driven and recently graduated software developer with strong proficiency in programming languages, software development tools, and analytical problem-solving. Eager to contribute to innovative, real-world projects in a collaborative, agile environment. Committed to continuous learning, clean code practices, and delivering scalable solutions that align with organizational goal

EXPERIENCE

Project Intern & Team Lead – Mitra Foundation Trust

- Led a team of interns, delegating tasks and ensuring on-time, goal-oriented project delivery.
- Monitored project timelines, identified delays, and optimized resource allocation for efficiency.
- Applied AI-based tools to improve workflow, gaining hands-on experience in project planning and team coordination.

Frontend Intern – OJAS Hospitality Management and Software Technologies Feb 2025-June 25

- Designed and developed a hotel admin portal for managing multi-platform bookings (e.g., Booking.com, Agoda).
- Built responsive UI using React.js and connected backend using PostgreSQL and XAMPP.
- Implemented CRUD operations, real-time updates via RESTful APIs, and maintained codebase using Git/GitHub.
- Collaborated in an agile team, focusing on clean code, documentation, and cross-functional coordination.

TECHNICAL SKILLS AND INTERESTS

Technical Skills: Python, SQL, HTML, CSS(Basics), MS Office (Excel, PPT, Word)

Areas of Interest: Data Science, Data Analytics and Data Engineering

Soft Skills: Problem Solving, Self-learning, Leadership, Adaptability, Communication

Hobbies: Reading Newspaper and Novels, Watching Movies,

PERSONAL PROJECTS

Toll Plaza Management System using ANPR

Tech Stack: Python, OpenCV, Django, MySQL, HTML, CSS, JavaScript, Bootstrap, Razor pay

- Engineered an automated toll management system using Automatic Number Plate Recognition (ANPR), reducing manual processing and improving operational efficiency.
- Built a responsive web interface using Django, HTML/CSS, and JavaScript for driver registration, wallet recharge, and transaction history tracking.
- Integrated secure online payment processing via Razor pay, ensuring reliable and user-friendly toll collection.

ML-Aided Robotic Arm for Dental Diagnosis and Recommendation

Tech Stack: ESP32-CAM, ResNet50, Python, Deep Learning, OpenCV

- Developed an AI-powered dental diagnostic system using a robotic arm and ESP32-CAM to automate dental image acquisition and classification.
- Implemented ResNet50 CNN to detect malocclusion types (Healthy, Overbite, Underbite, Crossbite) with 83% accuracy, enabling real-time diagnosis and treatment recommendations.
- Demonstrated the system's scalability and clinical potential through successful prototype validation and integration of edge computing components.

EDUCATION

Bachelor of Engineering in Electronics and Communication Engineering

BMS institute Of Technology. Bangalore

2021-25

CGPA-7.8

Pre-University

Sujala PU College. Hassan

2019-21

Percentage-80%

School

Jawahar Navodaya Vidyalaya Mavinakere Hassan

2015-19

Percentage-70%

CERTIFICATIONS

- Completed Unified Certificate Course in **Python** From **UDEMY**
- Received a Completion Certification for **SQL** From **UDEMY**
- Received a Completion Certification for **HR Analytics** From **NPTTEL**
- Received a Completion Certification for **HTML** From **UDEMY**
