Maria's Day School, Howrah **Percentage: 92%**

WORK EXPERIENCE

Data Analyst

Sampurna Financial Services Pvt Ltd.

DEC 2024 - PRESENT

- Automated the end-to-end process of downloading and processing reports from internal and external websites, using Python and web automation tools (Selenium, playwright), reducing manual workload and saving 5+ hours per week.
- Designed and implemented automation agents and scripts using Python, SQL, Power Query to generate and schedule business-critical reports, leading to 100% reduction in human intervention and a 70% improvement in reporting turnaround time..
- Converted manual, repetitive reporting tasks into self-sustaining automated workflows, significantly improving efficiency and allowing teams to focus on strategic analysis.
- Gained practical experience in data automation, reporting, and web scraping in a real-world microfinance environment.

PROJECTS

TwitPredict: Stock Market Forecasting with Twitter Sentiment Analysis

A Stock Price Predictor ML Project

Python, Data Analysis, Machine Learning

- Conducted sentiment analysis on tweets of a specific company.
- Established a correlation between the content of tweets and stock prices. Successfully predicted stock prices with a higher degree of accuracy.
- Generated actionable insights by leveraging sentiment analysis and machine learning techniques, enabling informed decision-making in the financial domain.

SpendSavvy

Personalized Expense Tracker Web Application

HTML, CSS, JavaScript

- SpendSavvy is a basic expense tracker web application which shows total expenses for a selected period.
- Established the function of adding and removing expenses, categorizing transactions—Food, Travel, Shopping for better organization and analysis .
- Implemented a history functionality which involves recording and displaying the past expenses entered by the user.

NewsNest

A News App

Python, Tkinter

- Created a dynamic and interactive mini news app. Developed a user interface using the News API to aggregate real-time news articles from various sources.
- Incorporated the features of read More button that allows the users to open the full news article in the default web browser, along with Previous and Next buttons for seamless navigation between news articles.
