PROJECTS:

SCHWING STETTER (SALES CLOUD)

Managed this project when new requirement came to add various record types and page Layout with new field that was supposed to be mapped as per given requirement ,made various approval process and updated various objects related details. Wrote basic level triggers for this. Made new component with LWC as per requirement got changed .Created Approval process , flow and new data security with permission set was added ,few triggers replaced with automation as well(flow).

MAXFIT (SALES CLOUD)

Build this project from scratch as part of my training were various objects were need to beMade With various data security features like permission set and triggers for further customization visual force was also needed ,made this project single handedly under the guidance of team lead and trainer.triggers and lwc with visualforce was the main part of this project. Made community experience page on this as well .many components with frameworks were made

DONOR MANAGEMENT SYSTEM (NPSP)

Made this project for our company where main theme for this project was for donation made in NGO using NPSP Cloud where I designed recurring donation for user and campaign for user, for complex part in development apex was used .This project was made to make online donation more easy for user around the world globally. We also made this project by making extra customized app which was made in NPSP org for volunteer who are willing to serve the campaign.

special additional feature where also added and integrated with other system in order to look something extraordinary from other donor management system from client perspective and views. This project is made with by using point and click tools mostly and rest other part was made using SOQL method and successfully project was live on scheduled deadline

MOVIE BOOKING APP (SALES CLOUD)

Managed this project with given requirement came to add various objects,record types and with new field that was supposed to be mapped as per given requirement ,made various data security which defines the user requirements and wrote triggers which supports the requirements given. . Made new component with LWC as per given requirement

Created Approval process , flow and new data security with permission set was added . Asynchronous apex was also written in order to perform bulk operation and increase efficiency of app. Integration was done in order connect app with external application so that payment becomes easy.
