

Summary

Aspiring data professional with hands-on experience in machine learning, Python, SQL, data analysis, NLP, and end-to-end AI solutions, Tableau, Power BI. Experienced in deriving insights from complex datasets, building dashboards, and presenting findings to guide business decisions. Exposure to product analytics concepts (funnels, KPIs) and cross-functional collaboration. Strong interest in data-driven problem solving in fast-paced environments.

Skills

Programming Languages: Python, SQL (RDBMS)

Data Analysis & Visualization: Excel, Pandas, NumPy, Matplotlib, Seaborn, Tableau, Power BI

Machine Learning Frameworks: Scikit-learn, TensorFlow, PyTorch, Regression/statistical testing

Natural Language Processing (NLP) & LLMs: (Theoretical Knowledge) spaCy, TF-IDF, Prompt Engineering

Generative AI & LLMs: ChatGPT, Hugging Face Transformers

ETL & Databases: Basic understanding of ETL workflows and data warehousing concepts

Product & Web Analytics: Basic familiarity with Google Analytics, funnels, KPIs, user engagement metrics

App Deployment & Tools: Streamlit, Jupyter, Git, Agile/Scrum workflows

Work Experience

Junior Data Scientist

June 2023 to July 2024

Kaleidofin Private Limited | IIT Jammu

- Conducted end-to-end credit risk modeling on real lending data to detect loan default patterns, and identify key risk indicators.
- Performed data preprocessing and feature engineering on sensitive financial data with strict adherence to privacy standards.
- Enhanced borrower segmentation using K-Means clustering and PCA, improving risk profiling across applicant segments.
- Designed and deployed ensemble models (XGBoost, RF), boosting AUC by 14% and recall by 18% compared to baseline models.
- Reduced false negatives by 22%, enabling earlier identification of high-risk borrowers and directly supporting smarter, data-backed loan approvals.

Training

- Data Science & Machine Learning Specialization - BossCoder Academy | July 2024 – March 2025**

Completed a full-cycle Data Science & Machine Learning specialization covering Python, SQL, machine learning, deep learning (CNNs, RNNs, Autoencoders), NLP, and project deployment using Streamlit and GitHub. Developed real-world projects in healthcare, recommender systems, and business analytics.

PROJECTS

1- Customer Churn Prediction System – [Python, Pandas, Scikit-learn, XGBoost, SHAP, Streamlit]

• Built an ML pipeline using Telco data to predict customer churn based on service usage and account features, • Achieved 0.89 ROC-AUC using a tuned XGBoost model, and extracted churn drivers with SHAP explainability, • Deployed a Streamlit tool to score churn risk and support customer retention strategies in real time

2- Sales Performance Dashboard & Insights Report – [Excel, Power BI, SQL]

• Built an interactive dashboard to analyze retail sales across time, categories, and regions using real-world data
• Created dynamic KPIs and visuals in Power BI to track revenue, profit margins, and YoY growth with drill-down filter
Delivered key business insights identifying top-selling products, low-margin categories, and underperforming regions

3- AI-Powered Resume Parser & Job Matcher – [Python, Spacy, Hugging Face, TF-IDF, Streamlit]

• Built an NLP tool to extract structured details from resumes using NER and pattern matching
Applied TF-IDF and BERT embeddings to rank resumes by job description similarity, cosine-based
• Deployed a Streamlit interface for real-time matching; achieved ~85% accuracy and 40% relevance gain over keyword search

Certifications

- AZ-900: Microsoft Azure Fundamentals, **Microsoft**
- DP-900: Microsoft Azure Data Fundamentals, **Microsoft**
- Data Analytics Job Simulation, **Deloitte**
- Google Data Analytics Certificate (Coursera) – **In Progress (covering GA tools and dashboarding)**

Education

B.Tech : Computer Science, August 2023

Jammu University — J&K, India

CGPA: 8.4

High School Qualification

Mallinson Girls School

- *12th Grade Percentage - 96.8%*
- *10th Grade Percentage - 95.8%*
