UNIVERSITY PROJECTS:

Smart Stationery Hub Using NodeMCU and RFID :

Built a system to manage stationery supplies by verifying students through RFID cards and storing information in a database. Automated supply tracking and provided daily updates, helping improve efficiency in distribution and inventory control.

Customer Churn Prediction using Machine Learning :

Developed a customer churn prediction model using Python. Performed data preprocessing and EDA on a telecom dataset. Trained and compared Decision Tree, Random Forest, and XGBoost; selected Random Forest for its 84% accuracy. Validated results using additional unseen test entries for reliability.
